Project X: Love Potion Disaster
A Sonic the Hedgehog Fangame Jumpchain
Version 1.0

It's another lovely day on the planet Mobius: the sun is shining, the birds are singing, and Doctor Robotnik is attacking Nova City with a massive airship and an army of badniks while Sonic and friends fend him off. Nothing too out of the ordinary, right? Well today things are going to take a turn for the lewd and unusual thanks to a couple of new faces.

Nova City is home to the brilliant echidna scientist Doctor Akari, along with her assistants Pili and Mili and her greatest creation, the cyborg super-soldier Zeta the Echidna. But the good doctor happens to be out of the lab today and her two assistants are getting into mischief, cooking up a powerful love potion to help get themselves some boyfriends. Their secret ingredients are the awesome power of the Chaos Emeralds and Hormone X, an extremely powerful aphrodisiac devised by Doctor Akari. But only a single drop of it!

…and then one of Robotnik's egg missiles lands just a bit too close to the lab and they accidentally dump the whole batch in. *Oops*.

In a cataclysmic explosion a vast pink cloud of magical lust erupts out of the lab and begins spreading all over Mobius, corrupting everything it touches into nearly mindless sex monsters. Even worse, the potion itself has transformed into Venus, a self-proclaimed lust goddess powerful enough to rival Perfect Chaos, and she's bent on conquering all of Mobius and corrupting everything into her personal paradise using the pink cloud and the corrupted Chaos Emeralds.

Fortunately a few of Sonic's friends have escaped being corrupted for the moment. Now it's all up to Zeta, Amy, Rouge, Blaze, Cream, and Tails (with help from Eggman and Dr. Akari) to find a cure for the chaos and stop Venus before she transforms all of Mobius into a lewd parody of itself. Whether you aim to help save the day or just enjoy the chaos and collect a few waifus, you'll be here for the next five years.

Take these **+1000 Rings** and go have some fun with them.

Race

Choose one.

Mobian

You're one of Mobius's most recognizable inhabitants, the furry folk who count Sonic, Tails, and countless other heroes and villains of the Sonic universe among their numbers. Mobians can resemble any form of animal and consequentially come in all shapes and sizes, but they tend to be smaller than humans, often being only waist or chest high to adult humans. But whatever they lack in stature they often make up with special powers like Sonic's famous super-speed. If you prefer, you can be one of the primitive tribals of the Lost World zone, the futas of Stonecock Village.

Human

They're a rare sight in the Nova Islands but humans are the dominant species everywhere else on Mobius with many powerful nations and global organizations like GUN being controlled mainly by human masters. The Eggman Empire is of course the most infamous of these, and Dr. Ivo Robotnik stands as a testament to what sufficiently determined and brilliant humans are capable of even without the mystical powers that mobians often possess.

Robot

You're quite the unique creation, a mechanical marvel like one of Dr. Akari's cyborgs or Eggman's robots. Rather than the disposable badniks that Robotnik favors you're more akin to the likes of Zeta the Echidna or Metal Sonic or even Belle the Tinkerer: a brilliant scientist must have poured their whole heart and soul into making you rather than churning you out on an assembly line somewhere, and that's made you into a mighty machine that can stand toe-to-toe with Sonic and friends or the sorts of threats they routinely face.

Corrupted

From plants and animals to ghosts and demons, Venus's power corrupts everything it touches and you're not an exception to the rule. You're something that doesn't fit any of the other options on this list: perhaps you're a mutant beast from Leaf Forest, an incubus from Pumpkin Kingdom, or a creature of pure chaos like Venus herself, although if there's *another* of those running around then Mobius might be doomed no matter how hard the heroines fight. Corrupted don't have their own racial perks or discounts on account of their extreme diversity in species, instead they receive an extra **+300 CP** to spend on perks and items from the Corrupted origin whether they choose that origin or not.

Age & Gender

Choose male, female, or futa, and any age you prefer.

Origins

Choose one.

Hero

You're on the side of the angels, fighting together with Sonic and friends to save the world from Eggman's evil schemes and anything else that comes along to threaten the peace. You're one of the few who are unaffected by the pink cloud and the power of Hormone X but if you're not careful it's only a matter of time before you get corrupted into one of Venus's toys. Better get to work!

Corrupted

Venus's power corrupts everything it touches but you've chosen to revel in the chaos instead of fighting it like one of the heroes. Fortunately unless you were an absolute prude the corruption hasn't affected your mind as badly as everyone else or made you subservient to Venus in any way, and if you play your cards right perhaps you could be the one to take over the world in her stead.

Genius

Whether you're a heroic inventor like Tails and Doctor Akari or a villainous mad scientist like Dr. Robotnik, you're a genius scientist whose greatest power is your mind and the countless ingenious devices it allows you to create. Whether the Nova City incident is a disaster to be stopped or an opportunity you can exploit for your own goals is entirely up to you.

Discount Rules

Any origin can be taken as a drop-in option, causing you to simply appear in the setting with no backstory or any additional memories. Any perks and items associated with an origin are discounted 50% off of their listed prices for that origin. 100 Ring options with discounts are free for that origin.

Location

Nova City Zone
The crown jewel of the Nova Islands, Nova City was the bustling city center of the islands before the pink cloud was released and everything went to hell in a handbasket. Now it looks like a disaster zone straight out of a zombie apocalypse, with mindlessly horny citizens wandering the streets looking for anything that might help sate their endless desires. Surge the Tenrec rules this zone on Venus's behalf, operating from an abandoned nightclub but spending most of her time balls deep in her partner Kit.

Egg Argonaut Zone
The latest of Robotnik's aerial warships, the argonaut is currently in rough state thanks to the crew being reduced to berserk sexbots and Eggman being cut off from the control room. A few of Sonic's friends are cooped up in the brig, but anyone who isn't already corrupted will break out as soon as they wake up.

Leaf Forest Zone
A forested area on the outskirts of the Nova islands where the Egg Argonaut will crash-land shortly. Zeta's mother Eleanor lives in an idyllic mansion here, though it may not remain idyllic much longer as the plants and animals of the forest have been exposed to the cloud and begun mutating into sex-hungry beasts.

Atlantis Ruins Zone
The undersea ruins of a lost civilization, Atlantis Ruins sits between the two islands of Leaf Forest and the Pumpkin Kingdom and is *allegedly* the safest route to Nova City. Not even the fish are safe from the cloud of chaos, which is condensing into rain and pouring into the ocean in vast quantities. Be on the lookout as Venus herself is known to hang around in this zone from time to time.

Pumpkin Kingdom Zone
A haunted island ruled over by a ghost princess, this zone is full of ghosts, spirits, and a few demons who were already plenty lewd even before Venus came along. Somehow Sonic has been captured by princess Lah, who plans to force him to fall in love with her using one of Venus's Love Emeralds to turn him into his werehog form forever.

Lost World Zone
Far beneath the surface of Mobius is a land that time forgot, where dinosaurs roam and civilization never advanced beyond the stone age. But Venus's influence has spread here too and the raptor-riding futas of Stonecock Village are caught in the thick of it. The Deadly Six have taken up residence here as well, with Zeena promoting herself to leader by virtue of out-fucking the others, but she too answers to Venus.

Delta Labs Zone
Ground zero of the explosion, Delta Labs is where Dr. Akari and her colleagues did valuable work making the next great scientific breakthrough, although they also seem to have spent an awful lot of time creating high tech sex machines and aphrodisiacs and so on. Venus has taken over the labs and turned them into her lair, and anyone who wants to find a cure for the chaos will have to come here and face her.

Perks

General

Mobian Physique (Free)

Mobians were plenty lewd even before everybody started losing their minds and some of them don't even bother wearing clothes at all, but nobody ever gives Sonic and Tails grief about the pants they don't wear. Maybe it's because they're nice to look at, just like you are: you're quite a looker with a body that's worth appreciating no matter how much or how little you wear. Whether you're a mobian or human or something else entirely you're hot enough to make heads turn when you walk into a room and well-endowed enough that your lovers will never be disappointed in you. Chiseled muscles, curves for days, perfect proportions, whatever goes into your ideal bod you've got it, and if you want something unconventional like Robotnik's chrome dome and egg belly then to hell with it, somehow you can even make that work for you. You don't need much effort to maintain your good looks in this ideal state either, because your fur and scales seem to groom and style themselves naturally and leave you only the bare minimum to worry about.

Mobian

Supple Little Shortstacks (100 Rings)
Mobians are hardy little critters and even though they're much smaller than humans they're much tougher on the outside while being supple and stretchy on the inside, as if they were *made* to fuck and get fucked by creatures much bigger and stronger than they are. Mobian or otherwise, you're tough enough to take a dicking and keep on ticking, walking off all but the most dire wounds and healing from truly absurd abuse both in and out of the bedroom. When a monster cock larger than your whole body dumps gallons of cum into your womb or tentacles spitroast you from end to end you can take it like a champ, your body shifting and stretching like elastic instead of breaking under the strain and feeding you painful pleasures for being pushed far past an ordinary person's limits. Likewise, no matter how much of a beating you take in a fight your body maintains peak performance until you can no longer move or fight rather than slowing down as your injuries worsen, and with a little rest and recovery you can heal from just about anything.

Au Natural (200 Rings)
Humans can hardly function when they're bare-ass naked but clothing is more of a recommendation than a requirement for the average mobian. Sure, most of them will opt in for fashion reasons or to help make their human friends more comfortable, but if Sonic and Tails go racing around in just their shoes nobody even bats an eye about it. Likewise, nudity or near-nudity simply doesn't pose any of the normal problems for you for one reason or another: maybe your junk is hidden beneath fur and scales when not in use and your blood runs hot enough to stay warm even on snowy mountain peaks, but whatever the explanation is it works wonders. Moreover, in any situation where nudity is *helpful* those benefits are greatly magnified. Under a hot summer sun you get a perfect full body tan instead of burning up, and the sight of your naked flesh can make anybody who's already attracted to you completely take leave of their senses and do all kinds of silly things in the hopes of earning a sexual favor or two.

How Fast Does a Bunny Bounce? (400 Rings)
Most of the time mobians seem cute and innocent but these critters have deceptively powerful sex drives. Sonic may be the fastest thing alive but when Amy goes into heat even he'd be in danger of being milked dry by a super-strong insatiable sex fiend if it weren't for his own even more well-endowed werehog form. Whenever the mood strikes you're able to push yourself into an animalistic heat, an enhanced state which makes your libido skyrocket and your pheromones sharpen into an intoxicating aura of lust which spreads that arousal to everyone within fucking range. What you *don't* share is the immense strength and stamina that comes with your enhanced libido, multiplying your physical abilities several times over and giving you the raw strength and endurance to match an entire orgy of lovers or enemies who would've been a match for you without this boost. While it may *look* like an uncontrolled rampage of bed-breaking fornication, you can end this "rage" at will whenever you decide you're sated.

What I'm Made Of (600 Rings)
Sonic may be the fastest thing alive but many mobians have their own unique powers, and you can count yourself among them. On top of being just as athletic as Sonic and friends, you have a special power like Sonic's famous speed which you can utilize in any way you can imagine, whether you wield mystic flames like Blaze, command electromagnetism like Surge, or bend time and space like Shadow. Your powers are roughly equal in most ways to those other heroes except that you can fuel them with your lust as much as your endurance, harnessing your arousal like a shot of nitrous oxide straight into the engine of your heart. Using your powers in lewd ways is nearly effortless for you, both in terms of your energy expended and in how easily you can find new and creative ways to apply your powers in ways that shouldn't *normally* work, like how Surge can make her lightning strike with orgasmic force or conjure up galvanic doppelgangers to help her gangbang her victims into submission.

Human

Stupid Sexy Human (100 Rings)

Eggman may be a menace but whenever a greater evil appears Sonic and friends will gladly team up with their nemesis, at least until the day is saved. But when you're a master of seduction and manipulation you don't need to have such long and storied relationships to have your past misdeeds forgiven and forgotten. You're a devil with a silver tongue who can talk your way into and out of all sorts of trouble, from charming some pure-hearted mobian out of her panties to persuading your "allies" that the best way to swim across an aquatic zone is to equip oxygenating butt plugs. You can make even the lewdest ideas sound perfectly reasonable but what you most excel at is escaping the consequences of your lewd or villainous misdeeds. Sexual harassment and other petty sex crimes are just annoying but harmless pranks, while your plots for world domination or schemes to turn heroines into sex slaves are all water under the bridge the moment the danger they pose is past, as if you were merely an amusing comic relief villain instead of a true threat.

My Dear Nemesis (200 Rings)

Only Eggman is allowed to defeat Sonic and his friends, and no so-called goddess will steal his inevitable conquests from him, corruption be damned. Sounds awfully romantic for a decades-old rivalry, doesn't it? You have a unique animal magnetism which makes you extremely attractive to anyone you're attracted to as if you were destined rivals or lovers bound together by fate. Forget about questions of species, gender, or sexual preferences: something about you is fascinating and domineering enough to grab their attention like a magnet, and even if they hate you they can't help but be attracted to you and weak to your charms. This attraction can even steal your ~~lovers~~ *rivals* away from other lovers they may have: once you call dibs on them your would-be conquests are all but blind to the romantic affections of others, and immune to any form of corruption or mind control other than your own so long as you don't get corrupted first.

Human Supremacist (400 Rings)

Ordinary humans rarely have the supernatural physical abilities that mobians possess, but there's nothing ordinary about you, is there? Much like Robotnik you're a paragon of human strength, intelligence, fertility, and more: strong enough to shatter boulders with some effort, fast enough to react to an angry hedgehog, virile enough to satisfy a harem of lovers, and so on. Just like Eggman your strength is that of a bully who excels at punching down and dominating the weak, and the weak will find it nigh-impossible to effectively resist you no matter what sorts of clever tricks they try. Your body is unphased by attacks less deadly than your own natural strength, your mind easily dissects and counters the plots of less gifted schemers, and only a truly gifted temptress like Rouge has any hope of exhausting your libido and enduring your carnal talents without being reduced to a quivering mind-broken mess. However be wary of anybody who might be better than you, as your tyrant's strength is no help at all against superiors or worthy adversaries.

Hail, Lord Robotnik! (600 Rings)

Despite their strange powers mobians aren't the dominant race on Mobius: humans are, and men like you demonstrate exactly why that is. Just like Eggman you're a superior being with a dominant nature, born to rule over humans and mobians alike, and the aura of dominance that flows around you makes that nature impossible to ignore. You're the sort of man who can turn an insulting nickname into a title that strikes fear into your enemies: your presence makes your subjects quiver with awe and submissive lust, eroding their strength and weakening their feeble efforts to do anything but serve and obey. After all, how could anyone attack you with skill and conviction when their bodies quiver with desire and their souls *yearn* to for you to have your way with them? It takes a strong will to resist you and an indomitable heroic spirit to completely shrug off your influence but obeying your orders for any reason will gradually chip away at such defenses. Given time and patience, even the likes of Sonic and friends can be conditioned into loyal and eager pets.

Robot

Fucking Machine (100 Rings)
Eggman's war machines weren't built with sex in mind and frankly that's a crime on the good doctor's part. Thankfully you're not only perfectly capable of having sex just like any organic being, you're also far better at it than the average human or mobian thanks to your mechanical nature. Whether by Venus's corruption or by deliberate design, your mechanical parts and code simulate the same pleasure and arousal that any organic would gain from sex and seduction, and your enhanced body is freed from the inherent weakness of flesh and blood. So long as you have enough strength to move at all, your sexual strength and stamina are functionally inexhaustible and your tireless attention makes up for a lack of skill with sheer endurance. Like a vibrator plugged in to a nuclear reactor, your targets become ever more sensitive to your attentions the longer you spend on them as the merciless pleasure you give them compounds over time and erodes whatever feeble resistance they might have.

Armed and Amorous (200 Rings)
Once Venus had her way with Robotnik's war machines their weapons of war transformed into devices of debauchery regardless of the good doctor's original intention for them. Whether due to Venus's corruption or purposeful design, your weapons and items come equipped with alternate fire modes or other features which make them just as useful for sex as their original purpose. Weapons built for death and destruction like a buzz bomber's stinger cannon become able to disable or restrain foes with stunning orgasm lasers or chemical payloads of sticky restraints and aphrodisiacs, while advanced sensor suites and bionic eyes can see through clothes and identify erogenous weak points as easily as what they were designed to see. Any mechanical item compact enough to mount on or build into your chassis can be affected by this perk, and your mechanical body is able to have such items mounted on it if it wasn't already.

The Lazarus Factor (400 Rings)
It takes more than metal and programming code to make a robot who can keep up with Sonic and friends. For Zeta that secret weapon is the Lazarus Engine, a device that allows her to overclock her cybernetics far beyond their standard performance characteristics. You have a similar ability and can use any form of supernatural power you're exposed to, absorbing and storing its power like a battery and then continuing to generate it even if the source is no longer available. Zeta uses power from the sky blue chaos emerald to create lightning and channel it through her body and cybernetics but you can also consume other forms of energy, like Surge's lightning or Venus's chaos corruption, and even catch and consume energy attacks with your bare hands and convert them into a power boost or a recharge for any other abilities you have. You can only hold one such power at a time, but you can hold on to it for as long as you wish.

Super Fucking Robot (600 Rings)
Metal Sonic is arguably the greatest of Eggman's creations, a robot able to constantly evolve and improve himself by analyzing and copying bio-data from his opponents. You have a very similar adaptive evolution system which allows you to copy powers and abilities from anyone you have sex with, this being your own method of analyzing their bio-data and generating your upgrades. Fully analyzing your target requires that they be thoroughly ravished, brought to orgasm a multitude of times in as many different ways as possible in order to get the most complete data you can manage. And even then a single session may allow you to copy a weak ability or a small upgrade to your physical abilities but only give a poor imitation of a powerful ability like Sonic's speed or his Super transformation, requiring a multitude of repeat sessions to acquire a true copy of that ability. However once you claim your target's data it's yours forever, along with whatever upgrades your body automatically produces using that data.

Hero

Freedom Fighter (100 Rings)
Sonic's not the only one who knows a few things about bashing robots and saving the day; his friends are pretty good at it too and even new girl Zeta is just as capable as the more veteran heroines. Just like Zeta and the other freedom fighters you're a skilled fighter who knows how to kick ass and take names like the best of them. Whether you're self-taught or formally-trained, you have some combination of superhuman strength, speed, and toughness roughly on par with Amy, Rouge, and the other heroines; dodging gunfire and bashing robots around is old hat to you, and since many of those robots often have innocent animals or mobians trapped inside of them you're able to pull your punches and place your shots skillfully enough to nonlethally knock out your enemies whenever you could have done a lot worse to them, a vital skill for any hero who's dealing with hostile and sex-crazed but otherwise innocent civilians.

Pink Vaccine (100 Rings)
The pink cloud is corrupting almost all of Mobius but for unknown reasons a few people are immune to it. Even Robotnik and Dr. Akari don't know for sure why a few of the heroines can shrug off the pink cloud's effects while the others are just as sex-crazed as anyone else, but in your case it's your heroic willpower. You can simply grit your teeth and willpower your way through the pink cloud and other forms of passive corruption without being reduced to mindless arousal and not having a chance to put up a fight, although you're no more resistant to being corrupted and even mindbroken by active threats like traps or enemies. Other environmental hazards are also much easier for you to deal with: the scorching heat of Sandopolis and the frigid cold of Ice Cap Zone are merely unpleasant for you rather than life-threatening, and even the most extreme environments like the bottom of the ocean or the void of space are easier to survive in, though you'll still need protective gear if you want to stay there unharmed for longer periods.

Power from Pleasure (200 Rings)
Sex didn't become a bad thing just because Venus is trying to use it to conquer Mobius, in fact it's wise to indulge yourself every now and then and rub one out in between battles to take the edge off of everything the corrupted are trying to do to you. You're able to mitigate corruption and restore your energy reserves through sex and masturbation. Between the build-up and release of tension in your body and the post-nut clarity that comes from a good orgasm, you get a surge of renewed stamina and mystic power when you indulge yourself, and doing so with a willing partner also reduces the effect of corruption and mind control on both of you, gradually cleansing you back to a purified state. Being *forced* to indulge doesn't grant you the same corruption resistance but it does give you the same rush of energy, granting you a second wind that might help you take the fight back to whoever is trying to have their way with you, assuming of course that you don't just give up and let the horny thoughts win.

My Sweet Passion (200 Rings)
Team Sonic will need the power of the Chaos Emeralds to save the day this time but they could be hiding anywhere in the world… except actually they're all conveniently dwelling somewhere in the Nova Islands! What absurd luck the heroines have, finding these treasures right when they need them, but don't get too jealous because you have just as much good fortune when it comes to finding unique or hidden treasures. Whether you seek material treasure like the Chaos Emeralds or treasured people like your favorite lovers you're drawn to them as if by a magnet, and fortune will conspire to give you a trail of breadcrumbs which will guide you straight to your goal so long as you keep looking for it. However the route to your objective won't necessarily be a safe one; yes the girls did find all seven Chaos Emeralds, but they also had to take a tumble down a random hole in the ground and then fight their way through the entire Lost World Zone to find one of them, and you may find yourself facing similar challenges if the treasure you seek is especially valuable, powerful, or extremely far away.

Friendship with Benefits (400 Rings)
Sweet little Cream may not be much of a fighter all by herself but when she's with Cheese and her friends she can be just as capable as the other heroines in her own ways. The power of friendship is potent stuff, but you already knew that didn't you? You have the same heroic charm and charisma that Sonic has and you can easily forge powerful bonds of love or friendship with your companions, binding them all together into something much greater than the sum of its parts. You could easily become the beating heart of your own little friend group or harem or whatever you decide to call it, and whenever you combine your powers with friends or lovers you gain incredible synergy with them and can punch far outside your ordinary limits thanks to your superb coordination and absurdly powerful team attacks. Of course that synergy works just as well in the bedroom as it does on the battlefield, allowing you to pull off some truly wild feats with your lovers without an ounce of corruption or sex magic ever getting involved.

Thief of Hearts (400 Rings)
This is the first time the bad guys have taken such lewd interest in Sonic and friends, but leaning into that lewdness is a perfectly valid strategy: just ask Rouge, who specializes in seducing her marks and robbing them blind while they're distracted by her womanly charms. Just like the sultry jewel thief, you're a master of seduction and manipulation whose captivating charms and impressive sexual prowess can capture the hearts of anyone you might desire. From handsome hunks and lovely ladies to wild animals and even the most well-programmed of Eggman's robots, few can resist your charms and *nobody* can just ignore them, which also makes them a useful weapon if you choose to use them that way. You can easily get your foes lusting over you to the point of trying to have their way with you, trading violent intentions for lustful ones. Sure, this means they'll do *all kinds* of lewd things if they get the chance but if you want a little bit of extra insurance to stop *real* danger from coming your way then this'll do the trick quite nicely.

Get a Hold of Yourself! (600 Rings)
Not even a chance to score with Sonic will tempt Amy into doing naughty things before her wedding night, pink clouds and pervert sex monsters be damned. She may be a hopeless romantic but the power of love (and a really big hammer) will see her through this crisis with her chastity intact and her heart unchanged. You're a champion of love like Amy is and the power of love and romance makes you damn near immune to all forms of corruption and mind control. Although clever enemies may still be able to exploit your kinks like an achilles heel, no amount of brute force can permanently alter your heart and mind. The same goes for the people around you: not only are your allies more resistant to corruption just by having you around, but even if they do get corrupted you can just smack the corruption out of them and force them to come to their senses, even forcibly undoing physical transformations the way the heroines did to Sonic's corrupted werehog transformation. However *unlike* the heroines you can also be selective about how you apply this. Maybe that great big beastly knot might be worth keeping around for special occasions…?

Better Luck Next Time (600 Rings)
Venus is overwhelmingly powerful and her army of sex fiends grows by the hour. Opposing her is begging for a bad end at the hands of the goddess herself or her corrupted minions, but maybe that's exactly what you're hoping to befall you? You have the twisted karma of a heroine who suffers defeat after defeat while never failing in any permanent fashion. You're incredibly desirable in ways which ensure your foes always want to take you alive to have their wicked way with you if given the chance, even pulling their punches if necessary to take you in one piece. And when they do have their way with you, you'll recover from almost anything they might do to you given time, crawling your way back to health and sanity from even the most mind-breaking experiences that a goddess of sex and all her minions can throw at you.

Corrupted

Freedom Fucker (100 Rings)
Many corrupted are exceptional lovers but very few know how to fight, and most can only pose a threat to Zeta and the other heroines through their sheer weight of numbers. But you're a rare exception who's just as skilled in battle as you are in the bedroom, and you can blend your skills to use pleasure as a weapon. While you're no match for Sonic and friends with this alone, by fueling your blows with your libido you can shred armor and clothing like wet paper, and you're quite skilled at using pins, grapples, and other tactics to manhandle your lovers into perfect fucking position while also hindering their ability to escape or resist. Once you get your hands on them you can easily incapacitate your victims with mind-breaking pleasures that strip away their strength; even a simple kiss from you makes toes curl and wombs quiver with delight, and bringing someone to orgasm will leave them too exhausted to resist as you have your way with them.

Game Over (100 Rings)
The corrupted aren't satisfied with claiming their lovers just one time, not if they can dominate and corrupt them into eager and obedient little sex slaves. You're a master of conquest and domination who can tame even the most willful heroines and train them into good little pets. By forcing your victims to submit to you, whether by overpowering them in combat or ravishing them into submission, you make them permanently weaker and more submissive towards you from then on. As their bodies and hearts learn the pleasures of submission your slaves will find it ever more difficult to resist you at all, until eventually and inevitably you reduce them to eager slaves begging for more with hearts in their eyes. While some heroic types might be made of sterner stuff and demand greater effort to subdue, nobody can resist your talents forever if you're determined to conquer a particularly stubborn slave.

Apex Predator (200 Rings)
From Leaf Forest to the subterranean Lost World, Venus's corruption has made many plants and animals grow to immense size and strength and given them a ravenous hunger for sex with anything they can get their claws on. You might not be a carnivorous tentacle plant or a giant insect but you've been changed in a similar manner and you now gain far more sustenance from sex than from whatever you'd normally eat. Not only can feeding on a single partner's bioenergy sustain you almost indefinitely, consuming more than you need also makes you grow much bigger, stronger, and more virile at a rapid pace, even allowing your body to mutate according to your wishes as either a permanent transformation or a temporary form you're able to transform into at will. Even a scrawny little hedgehog could eventually level up into a might beast like Sonic's werehog transformation, gaining not just bestial size and strength but also razor-sharp claws and stretchy rubber-like limbs and a massive bitch-breaking knotted cock.

Baby Boomer (200 Rings)
All of the sex that everyone's having means that lots of babies are on the way whether Venus wins or not, but some corrupted monsters of Leaf Forest and Atlantis Ruins are so virile that the kids are already here! Whether you're the stud or the mare, you can use your innate bioenergy to control your body's fertility and affect any pregnancy you cause in all kinds of unnatural ways. You can consciously switch your fertility on and off at will or dump your power into a partner to impregnate them regardless of their species or gender and control the conditions of the pregnancy. By putting enough of yourself into it you can cut a nine month term down to a few hours or minutes for extreme rapid breeding, or sculpt the child in the womb using any powers of corruption you have so that they'll be born exactly the way you want them. You could even copy a page from Leaf Forest's corrupted spider monsters and have your offspring be born as full-grown adults or useful but mindless drones which can only act as extensions of your will instead of independent beings.

Chaos Corruption (400 Rings)
Venus's minions have only a fraction of her power over lust and chaos, but a fraction is all they need to be able to corrupt anyone who falls into their clutches. You're able to transform and corrupt anyone you have your way with, sculpting their bodies and minds like clay by ravishing and toying with them. You can easily mold a virgin pussy into a perfect fit for your cock or transform unimpressive bodies into erotic beauties by lavishing them with attention and desire; you might play with your slave's breasts until they swell up to the exact shape and firmness you like best, or force her to drink your cum until her body needs nothing else. You can also shatter minds with pleasure and then put them back together any way you please: perhaps you'll capture an experienced lady like Rouge and ravish her until nobody else can ever satisfy her again, or take a prudish romantic heroine like Amy and teach her the pleasures of a thousand different kinks and fetishes even as you steal her heart from her one true love.

I'll Be Back (400 Rings)
Even the power of the Chaos Emeralds won't be enough to defeat Venus for good, only enough to dispel the pink cloud and send her into retreat. She'll be back, and next time the heroines might not be so lucky. Like Venus, you're extremely difficult to kill and it's nearly impossible to permanently cure your corruption while you're still alive. Once per jump you can escape any situation that ought to have killed you, such as narrowly surviving a blast from the chaos emeralds and then beating a hasty retreat before anybody gets a chance to finish you off. Some would call that a win but anything you lose by retreating this way is easily regained the moment the situation turns back in your favor: resources stolen from you are easily replaced, while slaves freed from their corruption fall back under your influence so easily that it's like they never left.

God(dess) of Desire (600 Rings)
Only the infinite power of the Chaos Emeralds could create a being as powerful as Venus, and her claims of godhood are no idle boast. Now you share this goddess's power: you're a being of liquid corruption and a shapeshifter with full control of your body's shape and appearance. Your mere presence is pleasure and your touch is orgasmic bliss, making all of your powers of corruption far more potent for anybody who falls into your liquid grasp. Moreover, your sheer mass grows as you gain strength: not only can you shapeshift your entire body into any shape you wish -- sprouting tentacles, copying appearances, slipping your entire body through cracks and crevices, and so on -- but if you gain enough strength you can use the additional mass to split off bits of yourself and make clones you can remotely control, or store that extra mass within yourself and unleash it all at once to grow to an absolutely monstrous final form, potentially large enough to topple buildings or swallow up hundreds of puny mortals at a time in a vast tidal wave of corruption.

Midnight Bliss (600 Rings)
From Princess Lah's ritual magic to the hypnotic music of the chao, many corrupted have magical abilities but few can rival the succubi and incubi who inhabit Pumpkin Kingdom and were masters of carnal magic long before Venus was born. You are one of the few, a magical prodigy like the ancient sorceress Merlina or perhaps a demon lord in the making. Your arcane skills allow you to command chaos energy with ease and your power is rivaled only by wielders of the chaos emeralds: you could easily genderbend a cute fox boy into an even cuter girl, conjure and control ropes and chains to bind and gag your enemies, and even hypnotize your lovers with lewd visions that leave them helpless to resist as you have your way with them. More traditional spells like teleportation or elemental magic are also within your abilities but lewd magic is far easier and more powerful for you than conventional spellwork of a similar level. Moreover, while strong hearts and clever minds might be able to resist ordinary magic, lewd bodies are always weak against your lewd magics regardless of whatever other strengths they would normally have.

Genius

Nerds are Sexy (100 Rings)
Pretty faces and bulging muscles are nice, but smarts and skills are also quite attractive. Don't believe it? Just ask Rouge what she likes so much about Tails if you can get her to stop flirting with him for a minute. You have a brilliant mind equal to Eggman, Tails, or Doctor Akari, including a superhuman learning curve, memory, reflexes, and many other benefits of being one of the most intelligent people alive. You might not currently know as much as Eggman but you learn and grow far faster than the average person, mastering new skills in hours or days when most others would need weeks or months. Moreover, your intelligence is *really* sexy: being a nerd and solving problems in intelligent ways makes you seem incredibly attractive to any potential love interests, giving you a universal appeal that crosses boundaries of species, orientation, gender, and other mundane concerns, although your plans for world domination may still be a red flag for anyone who directly opposes your ultimate goals.

Depraved Genius (100 Rings)
Whether they're obsessed with robots, chemistry, or world domination, all true mad scientists are perverts of one sort or another and not even the laws of science are safe from the depravity of their brilliant minds. Much like Dr. Akari and her coworkers at Delta Labs you're a mad genius with a specialty in aphrodisiacs, sex toys, and other all kinds of other lewd creations stretching across every scientific field. With this alone your skills are confined to this specialty, but within your field you're *exceptionally* skilled: you can make a fucking machine in a cave with a box of trash, concoct powerful aphrodisiacs out of household chemicals, or program a basic hypnosis app from scratch in your head. As you gain knowledge of more conventional sciences you'll learn to combine them with these skills to make lewd inventions that are far superior to any conventional technology: sexbots which rival Robotnik's deadliest badniks, power armor compressed and miniaturized into a latex catsuit, oxygen rebreathers in butt plug form, and even stranger and sexier things straight out of sci-fi erotica are fully within your abilities if you put your mind to it.

Invention Implies Mastery (200 Rings)
It's not enough to be a master of inventing world-conquering doomsday weapons if you don't know how to use them effectively whenever some blue menace comes barreling over the horizon to thwart your plans. You're a master of using any device you built yourself, because who would know how to use a thing better than its creator? From wielding primitive melee weapons like a veteran warrior to drifting a vehicle around a race track like an experienced stunt driver, you intrinsically know how to bring out the best performance in your creations, not only when you're using them for their intended purposes but also when you're using them as improvised (or not!) sex toys. You might tweak the settings on a laser to give it a stun setting that paralyzes its targets with mind-shattering orgasms, calibrate cybernetic eyes and give them enough x-ray vision to see through clothes, or wield egg blasters and laser blades so skillfully that you can cut or shoot your enemies right out of their armor or knock them out cold without harming a hair on their bodies.

I'll Get You Next Time! (200 Rings)
It's extremely fortunate that the only two people smart enough to cure Hormone X's effects escaped being corrupted in the opening moments of the disaster. Much like Eggman and Doctor Akari, you have a knack for escaping situations that would've instantly incapacitated you, like surprise attacks and freak accidents. Half danger sense and half dumb luck, not even that stupid blue rodent can take you *completely* off guard even if he were willing to make surprise attacks in the first place, while freak accidents like lab explosions only ever happen when you're safely under cover or outside the blast radius. This dumb luck expires once you know you're in danger and can defend yourself, but your danger sense is permanent and makes you nearly impossible to catch as long as you're making a hasty retreat from a dangerous situation, whether from angry hedgehogs or from a herd of amorous monsters with unwanted designs on your anal virginity.

Backseat Driver (400 Rings)
Robotnik might have lost control of his badnik armies but he remains a genius of tactics and strategy, and Sonic's friends make surprisingly capable replacement servants as long as they're not thwarting his plans. You're a brilliant tactician who can lead small forces to victory over larger ones and conquer entire nations with an army of your own, directing your slaves and minions as easily as moving pawns on a chessboard. Whether those minions are mindless robots or headstrong heroines, they benefit greatly from having your superior mind dominating and micromanaging them rather than making their own decisions, and the more control you exert the greater the benefits become. For instance you could add your skills to those of your robot minions by remotely controlling them, or shield an organic slave against corruption and mind control by having her wear a uniform and accessories that give you direct control over her body and pleasure.

Mechanical Mentalist (400 Rings)
Free will has some real drawbacks even when it isn't an outright design flaw, and every scientist worth his labcoat knows to put a tight leash on his creations before they inevitably betray them. Pili and Mili learned this lesson the hard way but you're far more competent than those two nitwit sheepgirls: you've learned to design perfect loyalty in your creations, whether you're building robotic legions that are impossible to hack or programming true love into your AI daughter. Robotnik might have lost his armies to Venus's corruption but the same simply can't happen to your creations. Likewise, anyone you sufficiently transform or corrupt becomes just as unflinchingly loyal to you as if you'd built them to be that way: when you strap a princess into a brainwashing machine or a roboticizer, the only way to unmake her newfound loyalty is to first undo whatever it was you did to give her that loyalty, assuming that's even possible in the first place of course!

Eggcentric Inventor (600 Rings)
Doctor Akari may have mastered cybernetics and biochemistry but only one man deserves the title of the world's greatest scientist, at least until you turned up. You're a genius to rival Robotnik, a master of every known form of science who can even dissect and analyze supernatural forces and bend them to your will. From machines that use rings as limitless power supplies to aphrodisiacs supercharged by chaos energy to superweapons that channel the power of an enslaved god, nothing is beyond your ability to understand and dominate through science and technology. In fact domination is one of the ways you gain that special understanding of your test subjects: by intensely and intimately *researching* someone you become able to replicate their unique abilities in technological forms, like how Eggman created Metal Sonic after studying his hated nemesis and copying his powers. Granted, your methods are much more intimate than Eggman has ever been but they're no less effective, and by finding superpowered subjects or godlike beings and giving them a thorough "analysis" you can make *quantum leaps* in your scientific knowledge and abilities.

E.G.G.M.A.N. (600 Rings)
Only a genius like Robotnik has the vision necessary to dominate the world and shape it into its ideal form and no self-proclaimed goddess can conquer a world that already belongs to him! You're a genius not just in scientific endeavors but also in diabolical plots and schemes: whether your goal is to conquer the world or just to conquer a harem, your superior intelligence can chart the perfect course to your objectives while manipulating people and events into playing out just as you desire. Your ability to predict events based on your available knowledge borders on precognition and allows you to spin wheels-within-wheels plans with dozens of layers and contingencies practically in your sleep. Strong-willed opponents present the greatest threats to your plans, but through seduction and domination you can sink your hooks in and turn them into unwitting pawns who unknowingly act exactly as you desire even without your direct intervention. It'd take a walking incarnation of chaos, freedom, and plot armor to stop your machinations - and without that you'll rule the world (or at least a harem) within a week.

Items

Hero

Booty Caller (100 Rings)

As the disaster unfolds, conventional cellphones and the internet are becoming almost impossible to use as their dependent networks start crashing. Fortunately there's nothing conventional about this personal communicator, similar to the ones the heroines are using to stay in touch with Robotnik and Doctor Akari. It's essentially a modern cellphone but built to Eggman's standards, with unlimited battery life and signal strength and no dependence on external networks or infrastructure. In the hands of an expert it can also run programs like a pocket-sized supercomputer, but even a novice can set the camera and microphone to record various events and replay them in a lifelike VR simulation, effectively allowing you to relive any events you find noteworthy enough to want records of, say for instance all the times you got ravished by monster cocks (or did the ravishing for that matter).

Eggtech Birth Control (100 Rings)

Eggman never does anything by half measures, not even birth control pills. Powered by thousands of tiny nanomachines with an irrational hatred for sperm cells and STDs, a dose from this bottle of contraception pills has a 100% success rate at preventing pregnancies and unwanted diseases thanks to the ingenious treatment method of *shooting the unwanted cells to death with tiny egg blasters*. (Thankfully the nanobots are accurate enough that you're in no danger of receiving an unwanted round of chemotherapy whenever you use them!) They can also target other types of diseases they find, apparently just on principle, as well as reverse unwanted mutations, like if Venus's spawn force parts of your body to grow to utterly obscene and impractical sizes. They're much less effective at treating mental or spiritual disorders such as Venus's corruption, so if you're slowly turning into a cock-hungry slut you'll have to deal with that some other way.

Power Ring (200 CP)

Golden power rings are a common sight on Mobius, especially if you hang around with Sonic and friends. Their mysterious energy can empower living beings and machines alike, granting some protection against serious injury or providing enough power to be used as a stable energy source for Eggman's badniks, but the love potion disaster has revealed that they can also provide some defense against Venus's corruption. This one seems to have gotten rather attached to you: instead of disappearing whenever you take a hit or get a big dose of corruption, it just loses power for a while and recharges automatically after a few hours. It protects just as well against any sort of lethal damage as it does against any amount of corruption large enough to inflict major alterations on you against your will, but can only do so once every few hours.

Badnik Basher (200 Rings)

Fists and feet and a spin dash or two may be all that Sonic needs to smack badnicks around but weapons are handy to have when tougher targets like Robotnik's mechs show up. From magical melee weapons to high-tech wispons, you have a unique weapon like Amy's piko piko hammer or Sonic's old friend Caliburn. This unique weapon is like an extension of your body and has immense power capable of multiplying your strength in some focused manner of your choosing. Amy is incredibly strong but with her hammer she can shake the earth and create hurricane-force gusts of wind, and other weapons offer similar powers such as a custom firearm with pinpoint precision, variable force, and unlimited ammo, or a Variable Wispon similar to the one Whisper the Wolf uses complete with a set of wisp allies.

Sidekick Squad (400 Rings)
Saving the world is a big job but at least you don't have to do it all by your lonesome. Amy and friends can call on the Freedom Fighters or the Restoration for help, Rouge can call on G.U.N. when she needs some extra backup, and now you have your own team of allies to help you fight the good fight, perhaps a squad of mobians kitted out with wispons or human soldiers with G.U.N. military hardware. They might not be as spectacular as Sonic and friends in action but they're elites at what they do and conveniently enough they all match your preferences perfectly, giving you a convenient little harem of sidekicks. They're also rather hard to put down as sidekicks go, being very resistant to long-term injury or corruption and bouncing back from just about any kind of abuse they might be subjected to in the line of duty.

Knot-in-Hole Village (400 Rings)
It seems like nowhere is safe from Venus's corruption and if Zeta and friends don't defeat her quickly she may very well take over the world within a matter of days. If or when that happens you'll be very happy to have found and revived this abandoned fortress village, a well-hidden secret base with a long and storied history of housing rebels and freedom fighters. No matter how corrupted the rest of the world becomes, this safe haven always remains clean and pure of outside influences, and simply staying here a while can cleanse your body and mind of poisons, disease, and magical corruption of all sorts. Moreover, something about the natural beauty of this place promotes strong and healthy relationships between its inhabitants, from friendships that last a lifetime to romances that could survive the literal end of the world.

Egg McGuffin (600 Rings)
Having the support of a genius like Robotnik is incredibly handy but also not without drawbacks: he might be able to come up with all sorts of miraculous inventions for you, but he's never going to be *nice* about it. For better or worse you have Eggman or some other temperamental mad scientist on call to create useful and *extremely lewd* items for you whenever you need them, although the more you lean on them to solve your problems (and the bigger those problems are) the more perverse and humiliating those solutions will inevitably be. Need to cross a large aquatic zone? You might get a crate of high-tech diving gear dropped in your lap but the oxygen rebreathers will come in butt plug form. Need a superweapon powerful enough to stop a chaos goddess in her tracks? That can *also* be arranged if you and all your friends are prepared to spend a few weeks at the mercy of a mad scientist's arsenal of sex machines just to power the thing!

Chaos Emerald (600 Rings)
The power of the Chaos Emeralds may be the only way to bring an end to Venus's corruption, so it's quite a stroke of good luck that you've already gotten your hands on one of them! These seven magic emeralds are the greatest power in the Sonic universe, and while you only get one of them to keep the other six will follow you to future jumps, and if you go looking for them you'll find them hiding out in the secret places of those worlds. The emeralds have the power to turn willpower into energy and all seven of them combined can grant nearly limitless power for a brief time or to accomplish a singular miraculous task, but the single emerald you possess is also an immense energy source which can enhance and fuel special powers like Sonic's speed or Shadow's chaos control.

Corrupted

Bottled Love (100 Rings)
The concoction that started all this chaos may have already exploded into a goddess-shaped disaster but Venus hasn't been shy about sharing her liquid essence with all of Mobius via the pink cloud. This vial of pink liquid lacks the explosive power that gave birth to Venus but it works perfectly well as the love potion that Pili and Mili originally intended it to be. Thanks to the chaos energy infusing it this concoction is much more than a simple aphrodisiac: it also has powerful transformative qualities that respond to your desires. Chug it down and you could grow a cock or change genders instantly, or splash it on an unfeeling badnik and transform it into an insatiable sex machine. While the scale of the potion's effects is limited to a single person per dose, it can change almost anything related to sex and erotic desires within those limitations.

Den of Indecency (100 Rings)
Even corrupted beasts need safety and shelter, if only so they have somewhere to keep any sexy morsels they decide to abscond with. More civilized deviants may prefer more classy and comfortable lairs, but the beasts of Leaf Forest aren't so picky and will settle for a hole in the ground when nothing else is available. You have a gift for discovering well-hidden and comfortable refuges at a moment's notice, places like cozy caves where the temperature is just right, conveniently abandoned buildings which still have decent beds, and other places you could easily pull someone into for a few minutes of kinky fun. These sorts of places have nothing to offer but privacy, but they are *very* private unless you're careless enough to let a pursuer follow you or a captive escape you. Once you duck into your temporary lair, you and any guests you bring with you will be impossible to find for several hours, although after those hours have expired you'll get no more benefit out of staying there any longer.

Seedbed Garden (200 Rings)
Leaf Forest didn't used to be full of carnivorous plants but the greenery has gained a taste for bodily fluids since Venus passed through: from tiny and harmless pussy flowers that lure you in with lovely scents and beautiful colors so they can suck your cock, to giant carnivorous piranha plants which gulp down hapless mobians and milk them for all they're worth. You have an assortment of seeds fit for growing a flourishing garden of corrupted flora, from roving tentacle vines and hypnotic cock flowers to immense pitcher plants, venus fly traps, and shambling tentacled horrors which turn intruders in your garden into their next meals. Raise your seedlings well (they like it if you water them with your own fluids) and they'll recognize you as a caregiver and form a bond with you not unlike very loyal and intelligent pets. What sorts of things could you do with a forest's worth of fast-growing tentacled plant monsters? I'll leave that to your imagination.

Chains of Corruption (200 Rings)
Having your way with anyone you please is great fun but if you want your conquests to stick around you'll need some extra gear to help make sure they stay put. Luckily you've collected enough BDSM equipment to stock a truly lavish sex dungeon, from basics like whips, chains, collars, and more to custom gimp suits and furniture like x-braces and many more imaginative things besides. Unsurprisingly, your gear is tainted by corrupted chaos energy, and while it's entirely harmless to you anyone else who gets locked into your bondage finds it entirely impossible to escape without help unless they're substantially stronger than you. Moreover, anyone so bound is much more vulnerable to corruption, slave training, mind control, etc. until you release them. Even those who would normally be immune to such things can be trained and shaped to your liking while they're completely restrained as their bondage slowly reshapes them into a submissive creature who craves a collar and a master's firm hand.

Tropical Paradise (400 Rings)
The Nova Islands are a tropical island chain and there are countless tiny islets where you could go to chill out and sit this whole crisis out if you wanted. Big the Cat is doing that, minding his own business with just Froggy and his fishing pole for company, but he still managed to fish up a chaos emerald and some horny heroines who came looking for it. You've claimed a small island of your own, though it's much bigger than the tiny islet Big is squatting on, perhaps large enough to support a small town if you wanted to build one. The waters around your island are home to the most delicious fish you'll ever taste if you care to put a line in the water, but something in the ancient sunken city on the ocean floor also makes it a treasure magnet which passively attracts precious treasures and beautiful maidens who'll just wash up on the beach out of the clear blue. Even powerful relics like the chaos emeralds are drawn to these tropical shores, and even the Master Emerald itself might appear if circumstances conspired to drop it into the sea somewhere.

Haunted Mansion (400 Rings)
Pumpkin Kingdom was a haunted land of monsters, ghosts, and demons long before Venus left a mark on the place, and the ghostly chateau at its heart is an ancient stronghold of dark and lustful magical powers. You've claimed this mansion or another like it and the dark powers in its foundation are now yours to wield as you please: while you're within the manor any form of dark magic or sex magic is greatly augmented in power and ease of use, allowing you to use witchcraft, necromancy, and any magical powers derived from corruption (such as hypnosis or transformation) with much greater effect than would normally be possible. You could summon an army of ghosts for the same effort you'd normally need to call up just one, or safely bind demons who would normally be far too powerful for you to dream of controlling, or perform a ritual to permanently turn everyone's favorite hedgehog back into his lost werehog transformation.

Cult of Venus (600 Rings)
Venus rules the corrupted Nova Isles like the goddess of pleasure she claims to be, and like any goddess she has begun amassing a cult (or a harem) of loyal followers out of those who've fallen to her corruption. You've begun forming a cult of your own, a hand-picked harem of lovers who perfectly match your tastes and are so loyal (or so deeply corrupted) that they'll eagerly follow you as long as they live. They excel at seducing and corrupting others on your behalf and you can effectively act through them if they lay hands on somebody you want for yourself; it might be their body going through the motions but it'll be you in the driver's seat and your perks doing the corruption rather than their own limited abilities. Naturally, anybody else who becomes similarly loyal or corrupted can also join the ranks of your harem, which functions as a group of followers and can be imported as companions in future jumps.

Love Emeralds (600 Rings)
The first things to be corrupted by Venus's power were the chaos emeralds themselves, poisoned by her lust and transformed into the love emeralds before being scattered to spread corruption across Moebius. Each emerald is an incredibly powerful energy source capable of empowering a work of corruption or lust magic and dramatically multiplies the power and scale of that working. Unlike their untainted counterparts the love emeralds can *only* be used for lewd purposes and they can't be combined to create a super form but their individual powers are much greater for being so focused toward a singular purpose. For example one emerald allowed rainfall from the pink cloud to corrupt the entire ocean surrounding the Nova Islands while another became a virus that raced through the Eggnet and corrupted Robotnik's badniks *en masse*. As with the normal chaos emeralds this purchase grants you one emerald permanently and you can track down the others again and again in future jumps as they follow you on your chain.

Genius

Genius's Toolbox (100 Rings)
So where exactly does Tails hide all his weapons and gadgets? That fur coat might hide his family jewels but his guns and grenades and other tools are another matter. The secret is a hammerspace bracelet he wears under his gloves, granting him a small pocket dimension large enough to hold small weapons and gadgets and retrieve them at will. Quite the handy accessory when you don't have any pockets! You own a similar one of these bracelets, although some mischievous prankster seems to have filled yours up with condoms, sex toys, and similar paraphernalia. There's plenty of room to fill it with other tools and items if you have them and with a bit of tinkering you can even get it to connect to your warehouse. You won't be able to store and retrieve any items larger than a handheld tool with this alone, but that should hardly be any limitation at all for someone of your intellect.

Disaster Insurance (100 Rings)
Doctor Akari didn't concoct Hormone X without also inventing a serum to reverse its effects, and it's only a lack of access to her lab that prevents her from brewing a vaccine to reverse Venus's chemical corruption. You have a similar amount of foresight: whenever you create a drug, robot, or some other invention which can potentially be used against you, you also automatically invent a way to easily neutralize your creation. Every drug has an antidote, every robot minion has an override switch, and every computer system has a secret admin password and backdoor network access. Naturally, you are the only one who knows how to actually *use* these hidden contingencies so they can't be used against you either: it's simply impossible for anyone else to discover these hidden exploits no matter how hard they look for them, that knowledge being exclusively your own unless you deliberately share it.

Roboticizer Mk.69 (200 Rings)
Long before Venus was ever born Robotnik experimented with mechanical corruption with a device called a roboticizer which could transform living creatures into his robot slaves. This new and improved model is an evolution on the idea, a large pod filled with lewd machinery: it corrupts and transforms its captives via cybernetic enhancements and nanomachine injections while brainwashing perfect loyalty into them using hypnosis and orgasm torture. The process benefits from any perks you might have that would improve the end result as if you were doing it yourself, and depending on your preferred settings the final results range from the classic fully-robotic transformations to a thoroughly brainwashed but otherwise organic sex slave adorned in a latex uniform and her new master's symbol emblazoned on her womb. A **Genius** with a few perks under their belt can also upgrade this single-occupant capsule into a giant prison capable of holding a few dozen victims at a time, similar to the prison capsules Eggman sometimes uses.

Mind Scrambler (200 Rings)
While Robotnik prefers to create his own mechanical minions the late Doctor Starline favored mind control for dominating his intellectual inferiors, and at least one of his favorite inventions outlived him. This pair of glasses is an improved version of Starline's mind scrambler and can hypnotize any unknowing target who makes eye contact with you, either giving your words the weight of a hypnotic compulsion or placing your target into a trance for prolonged periods. Success isn't certain against strong-willed targets but whatever the scrambler lacks in power it makes up for with insidious subtlety, as even when it's activated it shows no signs of being anything more than an ordinary pair of high-tech smart glasses. The scrambler also has no side effects for its targets to notice, and you could potentially hypnotize a hapless heroine right in front of all her friends without any of them realizing that anything is amiss if you're smart about it.

Egg Base (400 Rings)
A genius of your capabilities needs a lab where you can work in peace without risk of being interrupted by roving packs of sex pests. That's why you've created a scientific fortress equal to Delta Labs, a sprawling facility equipped with all of the infrastructure you need to perform feats of science and manufacturing on a grand scale, whether you're building armies of robots or doomsday weapons or whatever else you desire. Of course infrastructure is rather vulnerable without security to protect it but your lab is a maze-like citadel with enough defenses to give even Sonic and friends a hard time. These include bondage traps, hypnosis drones, roaming mechanical tentacles, and other sorts of weapons-grade sex toys of your own design, all of which function automatically but can also be controlled remotely and used as proxies for any applicable perks you have as if the security was a mechanical extension of yourself. Any fool who disturbs your work will be forced to run a gauntlet of lewd traps and sex robots while you toy with them from a safe distance.

Love Machine (400 Rings)
It's quite fortunate for Venus that Eggman never got a chance to deal with her his way because it probably would've involved some *very* big guns. Similar to Robotnik's mechs or Tail's beloved Tornado, you have a personal vehicle or suit of powered armor built to battle corrupted enemies, with defenses that guard you against contamination and weapons which turn your opponent's own arousal and corruption against them. After all it's rather difficult to molest someone who's wearing more metal and automated countermeasures than most main battle tanks, forcing enemies to pry you out of your armor via brute force before their lewd attacks will have any effect on you. And that's assuming they don't run afoul of your weapons, which grow more effective the more corrupted a target is. These might include vibro-cannons which can cause instant orgasms at a thousand yards, drone swarms which ensnare targets in weapons-grade bondage gear, and many other ways to dominate your enemies and remind them who the *real* final boss of this universe is.

Flying Battery Zone (600 Rings)
Few weapons of war are quite as impressive as Robotnik's warships. These flying battleships are geared for battling armies and bringing entire cities to their knees and by acquiring one of your own you've gained enough military force and firepower to conquer small kingdoms like the Nova Islands. Armed and outfitted to your specifications, it can be a conventional airship just as easily as a dreadnaught of debauchery with the sort of weaponry Venus would approve of, albeit their sheer scale degrades accuracy if used against human or mobian-sized targets. The ship itself is vulnerable to being attacked from within if some plucky hero manages to slip through the outer defenses: the crew may be incapable of mutiny (whether because of being robots or brainwashed slaves or simple devout loyalty) but they're not much use in a fight unless you also purchased **Egg Base** and fuse these two items together, combining their powers and creating a flying doom fortress similar to Robotnik's dreaded Death Egg.

Genesis Wave Emitter (600 Rings)
One of Robotnik's greatest achievements is the Super Genesis Wave, a vast cosmic retcon which rewrote the Archie Comics universe from the ground up. This vast doomsday device allows you to make waves of a similar but much lewder nature: whenever you jump between worlds, it collects enough cosmic power to force a single change of your choice on that world. From rewriting the death of Maria Robotnik so that you can fuck her, to making all mobians inherently submissive toward humans, to forcing chaos to manifest its power through seven waifus rather than seven emeralds. One change of any scale can be made per jump but further uses can be acquired by collecting sources of cosmic power (such as the chaos emeralds) and expending their power to fuel additional waves, though wider-scale changes to timelines and metaphysics do require much more power than a small change that affects only a single person.

Companions

Old Friends and New (100 CP)

You may import companions to join you in this world for 100 CP each. An imported companion receives an origin and 800 CP to spend on perks and items. They may not purchase companions or drawbacks. You can import a maximum of eight companions, but if you wish to import the full set of eight you can do so for half price, 400 CP. You may also create new companions for the same price and benefits. Should you wish to bring someone from this world with you on your journey you can use this option to take them as a companion. You'll have to convince them to come along with you but you are guaranteed to meet them several times during your stay, though the circumstances will be a surprise. Each character gains the origin that best fits them as well as 1000 CP to spend on perks and items. Companions must be alive at the end of the jump to join you. Given this jump's tenuous relationship with Sonic canon, any character from any entry in the franchise can be fanwanked to be present and available for recruitment in one form or another even if they might not currently be in the Nova Islands.

Sonia the Hedgehog…? (Free)

Uh oh, it looks like one of the characters in this world has had some sort of allergic reaction to Hormone X and now they're not just unusually horny, they're also genderbent! Their transformation seems irreversible and they may or may not even realize that anything is amiss, as if their reaction to the pink cloud changed them or their identity retroactively. Regardless, this option doesn't immediately give you a new companion by itself, instead it allows you to change the genders of any characters you want to recruit as companions. Maybe Tails has transformed into an adorkable fox girl or Eggman has been replaced by an unreasonably attractive Eggma'am.

OC Companions

Each of these companions is free if you help them complete their goals.

Officer Hopps (100 Rings)

With Nova City at ground zero of Venus's awakening the police are completely overwhelmed and law and order has disintegrated, but that hasn't stopped rookie officer Judy Hopps from doing whatever she can to protect and serve her citizens. This brave little meter maid is a **Mobian** with the **Hero** origin and 1000 CP worth of perks and items under her belt, but she'll need your help to unlock them by becoming a hero cop for Nova City, whether by taking out Venus or by protecting as many innocents as possible until someone else does it for you. In addition to her purchases Judy is an *extremely* skilled detective who can spot even the most well-hidden clues and connect the dots between leads that seem totally unrelated at first glance. She may be green and lacking confidence, but give her a trail to follow or a criminal conspiracy to unravel and she'll never fail to close the case, though whether she can handle whatever trouble she encounters at the other end is a completely different matter!

Desert Empress (100 Rings)

Princess Ankha is royalty from an ancient desert kingdom and she'll never let you forget it. This royal brat has the **Mobian** race, the **Corrupted** origin, and 1000 CP for perks and items, but is also a spoiled pillow princess who's far too lazy for the forceful dominance preferred by other corrupted. Recently roused from a long magical slumber, her goal is to rebuild her lost kingdom or at least regain the hedonistic luxury she once enjoyed as a princess, and if that means becoming a royal concubine while you do all the work and get all the power then that seems a fair deal to her. Ankha's powers of corruption can be far more passive and subtle than other corrupted, allowing her perks to work through seduction and manipulation instead of brute force, and she often entertains herself with lewd but harmless mischief like persuading your allies to wear more erotic outfits or seducing your minions into your bed for you.

Drawbacks

Progressive Infection (+100 Rings)
The pink cloud is bad enough on its own but you've acquired a more aggressive form of corruption than what everyone else is dealing with. Similar to Robotnik's metal virus (albeit not contagious), the corruption now affecting you is a progressive infection and If left alone it'll gradually reduce you to a mindless addict like the worst-affected of Venus's slaves. The good news is you can send it into remission and reverse the effects via frequent sex: whether you have your way with your companions or let the corrupted have their way with you doesn't matter much (although the latter naturally has its own separate risks), and defeating Venus will also bring an end to this drawback but the one thing you absolutely can't do is abstain from sex for too long lest you suddenly become totally incapable of any abstinence at all.

Gotta Go Fast! (+100 Rings)
The original version of this game put some truly godawful platforming gameplay into a beat-'em-up engine that was clearly never designed to support those sorts of precision movement challenges. You don't need to deal with those obnoxious things, thankfully, but you will often find yourself forced into taking hazardous routes resembling classic Sonic levels whenever there's danger afoot or you just need to get from point A to point B in a big hurry. A walk down a peaceful street might be no trouble, but trying to get from one side of Nova City to the other might involve taking a trip through the sewers or a lot of fancy parkour and jaunts across rooftops to reach your destination instead of just racing along at ground level like a normal person.

Two-Player Mode (+100 Rings)
Team Sonic is stronger together than they are apart but that's not to say some of them like Tails or Cream don't need a bit more protection than the others. Choose one of your companions or a character you'd like to take as a new companion: this character is now your sidekick and must be protected for the duration of the jump, and you'll be penalized for any failures to do so. Corruption which affects them will affect both of you and if they come to serious harm or worse a similar fate will be inflicted on you soon after. The good news is that if you successfully protect them all the way to the end of the jump you can take them as a free companion if they weren't one already.

Eggman Immunity (+200 Rings)
Having a no killing policy is great and all but are you absolutely sure you can't make any exceptions? No? Alright then, you're in the same boat as Sonic and Eggman, being totally incapable of killing your enemies whether because you're too much of a big old softie to compromise your principles or they're too slippery to ever properly finish off or just because Sega says it's not allowed and that's final. Granted this is a lewd setting and ideally you wouldn't be doing much killing anyways but now it's not even an option to get your enemies to leave you alone; just like Eggman and Venus you can expect them to keep coming back again and again for the duration of your time in this jump.

Late to the Party (+200 Rings)
Normally this jump begins when the game begins: right at the outbreak of the love potion disaster, before Venus has had a chance to spread her corruption beyond the Nova Islands. But that's no longer the case and you now begin a month after an outbreak which went very badly for whoever you would've sided with. If you're Corrupted then Venus has been dealt with and you'll have no help from her or her minions, but if you're a Hero or a Genius then Venus has already taken over most of Mobius, scattering or corrupting the heroines and Robotnik and even sinking her claws into Sonic by corrupting his werehog form and locking him into that state with Princess Lah's magic, so don't expect any miraculous rescues from the blue blur. Either way, you're going to have precious few allies and many many enemies looking to be rid of you the moment the jump begins, so you'd best be ready to hit the ground running.

Chaos Uncontrolled (+200 Rings)
The Chaos Emeralds are critical to resolving the threat that Venus poses but unfortunately they've not only been corrupted into the Love Emeralds but also shattered into pieces much like they were back in Sonic Adventure 2. Venus's minions have a large chunk of each emerald with all of the same powers as before but in order to use them for yourself you'll have to hunt down all the individual shards and gather them together to make them reform into the completed Chaos Emerald. To make matters worse, others including Venus's stronger minions are sure to also be searching for the emerald shards so whenever you find one you had best be ready for a challenging boss fight of some sort.

Venus' Chosen Lover (+300 Rings)
To say that Venus isn't the monogamous sort would be the understatement of the century but she seems to have fallen for you harder and faster than anyone else she's ever met. The goddess of lust wants you in her harem and will be hunting you down personally, devoting all of her minions and resources to adding you to her collection of slaves. You must resist the manipulations and active pursuit of a Chaos Goddess of Love is out to turn you into her perfect Lover. If she captures you she will break you into her pet lover and she has a deeply toxic idea of what love is actually about. Needless to say, if you're captured and are still in Venus's harem when the jump ends that will be the end of your chain.

One Hit Wonder (+300 Rings)
The corrupted can take quite a beating before they go down yet all it takes is one screw up for them to get the heroines into a bad spot, shredding clothes like tissue paper and pinning them in helpless positions at the slightest opportunity. You now share this weakness with Amy and the others: no matter how tough you normally are you job like a bitch whenever someone lays hands on you with intent to fuck. Sure you might be able to blitz through hordes of gooners and take them out with effortless skill and grace but you've also got a glass jaw and if you ever screw up and all it takes is one hit to put you in your place.

Not This Shit Again! (+300 Rings)
Venus's awakening was bad enough by itself, but now it has also sent shockwaves throughout the fabric of spacetime and caused the reappearances of many villains from Sonic stories of old, all of them just as corrupted as she is. From Perfect Chaos to Merlina and Black Doom and more, all hell is about to break loose on Mobius as these resurrected villains all begin vying with each other for control over the planet. The good news is they absolutely will not cooperate with each other, not even to take you out, but the bad news is that they'll quickly recover whatever armies of minions they might've had in their first outings and all of them will be some kind of corrupted thanks to Venus's power. You won't be able to move on from this jump until you defeat all of them and liberate the planet, so good luck with that.

Notes:

Archie or IDW Continuity?
Fanwank. The game makes reference to multiple contradictory continuities and includes characters from all over the Sonic multiverse, ranging from the games to Archie *and* IDW comics to the Sonic X anime. Treat the world outside the Nova Islands as a fanfic setting.

Armed and Amorous: Yes, if you become a giant robot the perk will apply to proportionately larger items.

Links to the game

As the original game is unfinished this jump is based on RedEye Samurai's modded version.
