GENERIC THICC VERSE

This jump was made with peoples help, so thank you!

By Midnight90

Take **1000 CP (Cum Points)** and be on your merry way!
This jump can be taken multiple times.

Origins

Expander (Free): You are here to EXPAND people, and to make others get expanded as well through your special types of magics.

Expandee (Free): You're here to GET expanded. Of course, to whatever size you want, you're more susceptible to it anyways.

Normal (Free): Your just a normal average person who could become an expander or get expanded and become an expandee. Of course though, you could choose to avoid the hyper but why are you here then?

Perks

General

Expansion Level (Free/Mandatory for All): Similar to power level, this is a level that rises when you expand. 1 to 10 means you haven't expanded at all, or just naturally busty. 10 to 20 means you are expanding slowly, and your body is slowly expanding. 20 to 60 means that your expanding a lot, and it might be dangerous if you go further. But that's fine, since it usually means you can expand further. 60 to 90 means that your body is growing a little too fast, but even then, your enjoying it.

Vegeta! What does the Scouter Say about His Power Level?! (Free): You can sense the power level of your opponents, their tier, everything about them. This can be applied to your companions as well.

Expander

Expansion of Power (-100CP): You gain **+500CP** to spend in the Expansion Methods section below and an extra **+100 CP** to spend on items and perks.
Growth of Potential (-100CP): Your power can grow just like any shonen anime protagonist, the key to using this perk is usually to grow sexually, and the more you grow, the more powerful you will get. This stacks with other perks.
Expansion Suggestion (-200CP): You can suggest someone to expand, putting almost like a hypnotic command in their mind. Once this does happen however, they get a sudden compulsion to grow bigger, and the more you use this perk, the stronger it gets. You can also snap them out of it on command.
Intense Building(-200CP): You can build things in a matter of seconds...and you could build people's sizes as well as long as sex toys are used, with magic. This also increases your power by x20, and allows you to grow stronger much easier.

Big Science (-400CP): You have the knowledge, skills, and memorised recipes necessary to create various drugs, in liquid, tablet or other form, that can be taken to shrink or expand the body. This also comes with a free purchase of *Expand Pills* from the item section.

Generation Spreading (-400CP): You know how to raise up the next generation of Expanders, or even show an Expandee the methods to spread their fetish to others. Every expansion method that you have, you are capable of teaching to others.

Hokushin (-600CP): So you took this perk eh? Alright then. This perk allows you to create exact hyper sized clones of yourself, for your own enjoyment. This also allows you to take **any jump** 3 times, rather than having to use a new jumper for each jump. The reason this jump costs 600 CP is because it can be used for every OP things.

Hyper World (-800CP): When you arrive in the setting, your targets are already hyper-sized… and always have been. This can apply to specific characters you choose, specific demographics (such as only females, only elves, etc.), or just *everybody* in the setting. You also get to control the exact specifics of how the effect manifests, and these can also vary between demographics.

Expandee

Hyper Anatomy (-100CP): You can control the size of your tits, cock, and ass; and also grow or remove each, if you do or don't already have them. You suffer no ill health effects from having a hyper body. Finally, you gain **+200CP** to spend in the Hyper Anatomy section below to decide the details of your expansion.

Hyper Sized Mobility (-100CP): You can retain your mobility no matter the size of your body. Even with tits the size of a truck, you can still sprint at the same speed or even crawl through a tight space as if you were flat-chested, the swaying, bouncing, and extra mass somehow not getting in the way at all.

It's Just Genetics (-200CP): Your purchases from Hyper Anatomy are part of your genetics; this not only means that you'll pass the traits down to your children, but also applies retroactively, and you'll find that your parents, grandparents, siblings, cousins, etc. in each jump all share similar proportions.

Unusual Entry (-200CP): Some parts of your body are just more 'fuckable' than they would be on a normal person. Your urethra, your nipples, even something like your belly button or your ears can, at your will, take on the sensitivity of a vagina, and expand and reshape themselves to be a suitable hole to take insertions into.

Size Envy (-400CP): Other people are jealous of your sizes. You have a toggleable, targetable aura that causes men to be jealous of your penis, women jealous of your breasts, and anybody with the relevant anatomy envious of the size of your own. You can also choose to have that last condition ignored and make, for example, women develop penis envy when they see your massive cock and gain an overpowering desire to become a futanari. Expanders love you, because this desire can only be sated when they are as big as you, or they spend enough time away from you for the urges to subside.

Divinity (-400CP): Many depictions of ancient goddesses show them as being rather physically ample, as a sign of their power over life and fertility. The cause and effect of this are now reversed; people around you are now inclined to recognise your size as a sign of divinity, and feel a desire to worship your body. This doesn't grant you any extra magical or spiritual power, but do you need any when people will believe you to be a god anyway?
In addition, every god or god-like being within future settings will have a hyper-sized body suitable to your tastes, and religious iconography and other depictions will all be updated to match.

Giantess (-600CP): You can scale your entire body simultaneously, all the way up to giant-like size at a height of 500 feet, although it might take a minute or two to grow that large without practice. This applies on top of any hyper anatomy you already have, scaling them up alongside your height;

Control (-600CP): At will you have spells and you can control something at will. Whether it be human or plant, you can control its attributes and remake them for a few days.

Normal

Just Watching (-100CP): You are a master of voyeurism. Whenever other people are engaged in sexual acts, regardless of the fetish, they will not be concerned at all about your presence as long as all you're doing is watching (and, potentially, masturbating). Additionally, nobody will pressure you into joining in when all you want to do is watch.

Extremely Elastic Copulation (-100CP): Your body can take sexual insertions of any size into your mouth, ass, or pussy, and your cock can fit into any of the same in any other person's body.

All the Way Through (-200CP): Your body, in defiance of biology and physics, has a single pathway leading from your mouth down to your ass and/or pussy (yes, *and*/or). This has no unintended side effects, only working positively for you; mostly, that large enough objects inserted through either end can reach through and come out the other. Somehow, it all works out.

Hands (-200CP): You can grow any one part of your body, and you no longer receive back pain if you have a huge ass, or massive breasts, basically making you immune to normal function. You also become bulletproof, and can recover much easier from wounds.

Manipulation of Hyperness(-400CP): You can transfer mass between individuals, including yourself. One person's breasts can be shrunk down to increase the size of another's, and so on for every part of the body.

Metaphoric (-600CP): You are able to replicate the supernatural powers that you see others use, however only to a certain degree. This perk is mostly if you want to have a mode kind of like Goku's Super Saiyan or Titania's Scientist Mode, only increasing your power by that amount. (Basically means that you can adopt a similar form to them of your choosing)

Expansion Methods

In this section, you choose the method(s) that you can use to expand others to hyper proportions. You get an extra **+300 CP** to spend here. If you purchased the (*Growth of Potential*) perk, you get a **+200CP** stipend to spend on the perks in this section.

Magic (-200CP): You know a series of spells that can be cast via any method of magic you know, using any source of supernatural power you have, to shrink or, more importantly, expand any part of a person's body. If you don't have any method of casting spells, you may also invoke these spells by simply snapping your fingers with your intent in mind. Without any modification or training on the spells, they can only target one person at a time and only within a few feet of you.

Cumflation (-100CP): Using your cum, you can grow a cock or if you have a cock, its size doubles. You can fill them with cum during sex, and

Other Fluids (-100CP, or -50CP with *Cumflation*): Using expansion magic, you can

Endless Growth(-xCP): You can snap your fingers, and as long as you have the expanded sizes in your mind it can grow...and grow, and grow, until it stops. For 300CP you will be able to spread this effect to others through touch, or through sex.

Contagion (-100CP): This modifies all the other expansion methods you possess, and allows the effect to spread from one target to another. It may be an aura for magic, a chemical carried in their body for Big Science or Cumflation, or something else, but the end result is that expanding one person starts a chain reaction that creates a utopia of hyper-sized proportions... or gets the whole place put into lockdown.

Hyper Anatomy

In this section, you can design your own hyper body. If you purchased the *Hyper Anatomy* perk, you get a **+200CP** stipend to spend on the perks in this section.

Hyper Tits (-100CP): Your tits are simply MASSIVE, and you can grow them at will. These are quadruple your current size, and can grow even bigger. Pick a reference. You can grow your tits and you dont have back pain at all, in fact you can move awfully fast with that body of yours.

Hyper Lactation (Free with *Hyper Tits*): Hyper Tits are also there, you can also lactate entirely and give almost an infinite amount of milk. For +50 CP, this amount increases by x30, and your milk can put people to sleep.

Hyper Cock (-100CP): You have a massive swinging hyper cock that you can scale at will. Different artists draw varying sizes of hyper cock, but anything above building length will cost **-200CP** instead.
Hyper Balls (-50CP, or Free with *Hyper Cock*): Massive, fat, huge, hyper balls. These balls can go from wall length to building length, even higher and higher. Nothing bad, however will come of this, only more and more cum.
Hyper Cum (-200CP, or Free with *Hyper Cock* or *Hyper Balls*): Huge, fat, addictiving hyper cum. You have hyper cum that is filling people to tbe brim, making entire harems of women lust after your cock. This cum also makes people grow, and could even cumflate them for an extra +50 CP. If you took this perk for free, then the cumflation part is also free.

Hyper Ass (-100CP): Your ass is REALLLLY fat, like, massive. Your hips are also massive, how can you get through the door without needing a bigger one? This option costs 100 CP and for an extra +100 CP, it can be grown at will.

Hyper Filth (-100CP, -50CP with *Hyper Cock* or *Hyper Ass*): Hey. If your into this no judging. Your piss and excrement become hyper as well, enough to fill buildings from the smell. This comes with a free hyper toilet, which the plumbing is already paid for.
Hyper Pregnancy (-200CP, -100CP with *Hyper Lactation*): If your into this no judging. You can impregnate people using your hyper cock, and impregnate them with multiple babies, if not millions.

Inflation (-100CP): But what about your general body fat? This covers the rest of your body that wasn't covered above, letting you gain a more rounded shape.

Diphallism (-50CP): Each purchase of this option grants you an additional penis, pair of balls, or pair of breasts, sharing all the same proportions as your existing ones.

Items

Expander

Expand Pills (-100CP, or Free with *Big Science*): You can use these pills to quickly and easily expand someone; find the pill for the body part you're after, and it expands by x3 for five hours, good for a long sex marathon. If you have *Big Science*, these act as if they were crafted by you, and gain all the benefits of any crafting perks you might have.
Expansion INC(-600CP): You get your own company that you could name, giving you a special edge. This can be imported, and is the largest company/faction in the world your currently in. The HQ by itself can be imported into your warehouse, and comes with bathrooms, and everything already paid for.
Arrow Pelt(-400CP): You can also alter the sizes and properties of something given that the person gives consent.
Bimbo Blaster(-600CP): With this perk you can turn anyone into a hyper bimbo with a few hits of the blaster, and it would arouse them, make them squirt, make them all yours. This
Sword of Expan D'Arc(-600CP): With this you can replicate any size and any kind of sexual power that has been done on you. You can always revert this as well, and the sword counts as a combat item. When you use this item as a combat item, you can import it as a blade on its own, rather than being sexual. This sword is made of the most powerful ore in the omniverse, and is known to be able to kill Oversparked Jumpers.

Expandee

Mega Condoms (-100CP): With penises this large, no normal condom could possibly ever work. Luckily, you always have a few 'mega' condoms in your back pocket or your wallet, and a box full of them back in your warehouse. These condoms can fit penises of *literally* any size, and can fit any quantity of fluid that gets poured into them without tearing.
Expanding Wardrobe (-200CP): This is a wardrobe full of clothes that all stretch to fit your body, no matter how ridiculous things get. It is also a wardrobe that expands; any clothes that are placed inside it become a part of it, fiat-backed and always accessible. When you look inside to grab an outfit, the outfit you're looking for will always be within hand's reach.

Titania's Coat(-400CP): A tight coat that you could wear anytime and stacks with armor. While wearing this coat, your expansion grows by tenfold and like Titania's powers, you could also grow your body, and it fits around your new hyper body. This also can be as an alt form if you wish to have a non hyper form. With this coat, you could withstand attacks that could destroy planets.

Hyper Palace (-600CP): A hyper palace, your very own copy! This is a palace, like the other items, that allows you to grow people at will, and it expands. This can be an addon to your warehouse, and allows your companions to live within it. This palace comes with AC, bathrooms, electricity, a normal household. And yes, you can live here by yourself.

Blueberry Gum (-200CP): The use of this item is simple. This inflates enemies like a blueberry, but is gone after 30 minutes. For an extra +100 CP, you gain the ability while holding this item to make people into blueberries, and it absolutely feels blissful to do so.

Normal

Hyper Dildo (-100CP): On the fence about trying things out with a hyper partner? Luckily, this dildo is here to give you a taste of things before you make a decision. A button on the base lets you inflate or deflate it with practically zero limits to change the size; and despite the use of the word 'inflate', the texture is the same as any normal dildo. It is always lubricated, and somehow manages to just fit inside any of your holes no matter how large it is.

Hyper Fleshlight(-100CP): On the fence about fucking a hyper partner up his/her ass? Or perhaps needing to breed some pussy? This one is the one for you!

Shield of Obsurid (-400CP): With this item, you are immune to the effects of instant death, unwillingful expansion, and you could break through others defenses super easily. Warning: This may backfire in the enemy's favor if you don't use this item correctly.

Grand Expansion Lab (-600CP): You have a special lab that you could summon at will, with test tubes and everything. It comes with a few assistants that count as followers and can follow you into any jump, free of charge.

Companions

Import (100 CP for 1, 300 CP for 12): You can import some of your companions into this jump, and they get **800 CP, a free origin and a free item** from this jump. They can also recruit companions of your own if you choose, and their expansion level starts at 5.

Artist OCs (100 CP, for 300 CP for 8): You can recruit Artist OC's (Artist like Angstrom, Tasteofchoklit, IGPHhangout, someshittysketches and others) and bring them with you on their jump. They get **400 CP, a free item, a free perk and a free origin for this jump only.** Other jumps they are sure to get imported as well, and the artist OCs only need to be convinced to come to you and must be alive by the end of your 10 years here. They also can become as hyper as you'd like.

Refer to (For info on Angstrom, tasteofchoklit and IGPHhangout's OCs):

https://rule34.xxx/index.php?page=post&s=list&tags=angstrom+
https://rule34.xxx/index.php?page=post&s=list&tags=tasteofchoklit+
https://rule34.xxx/index.php?page=post&s=list&tags=igphhangout+

Create a Companion (-200 CP): You can create a companion with the Hyper Options described above. This companion gets **600 CP, and a free origin** to boot as well to spend. On future jumps they can be imported. Met someone you like here? Have a specific fetish you want to enjoy? This is your desired companion, and they start with an Expansion Level of 20.

Figure of Authority (-200CP): This man or woman is the president, queen, prime minister, etc, of whatever country you find yourself in in this jump. They use all the authority that they have to try and encourage the hyper fetish in their citizens, while also being a competent enough leader that most people look past their eccentricity. More notably, however, in all future jumps they are imported into where the same country exists, they retain their position; the two term limit doesn't apply to alternate universes, after all.

Drawbacks

Mass Inflation (+300 CP): Anything inflation wise that you dont want to happen might happen here, instead of your sizes growing, everyone else grows around you.
Shrinkers - a group of people who are trying to make everybody have flat chests, micro penises, etc.

Scenarios

To Expand Thouself

You want to become the biggest, don't ya? Well, If you do manage to become the most endowed in the world currently, I'll give ya 800 CP to spend plus anyone from this generic jump as a companion. In order to become the biggest, you must pick up every single expansion perk, and make yourself the most busty in the entire world.

Goddess of Expansion (Can be taken with To Expand Thouself)

A goddess of expansion has let loose and now wants to inflate you and everyone in the world you are currently in. If you manage to either seduce her or stop her, you gain 600 CP to use in this hyper jump, and if you let her expand everyone, you earn 200 CP instead, in order to get her as a companion however, you must complete this scenario and bring them to their knees, and make them absolutely yours.

Ending (Cannot be used if you are using Supplement Mode, Supplement Mode is essentially just applying this jump to any artist)

Go home: You spent your 10 years here and everything is back to normal. You can go back, taking everything you had with you and your memories as well.
Stay here You decided to stay here and fuck hyper gals for the rest of your days eh? Not judging you. You keep everything you have from past jumps, but you can still move on if you'd want.
Move On: Hey, the whole multiverse has to be hyper doesn't it? Well then, you can move on! Time is still frozen in other worlds you've been too if you so wish.
