Digimon Rearise 0.1

By saiman010

Introduction:

Jumper, it looks like you've found yourself in a fascinating world. This alternate reality discovered the existence of Digimon back in the early 20th century, a time when these digital creatures made their mark on the real world. However, as the decades passed, the memory of these encounters faded, and the once-vibrant connection between the human and Digital Worlds became nothing more than a forgotten chapter in history. Despite this, the bond between humans and Digimon has not been entirely severed. Those who continue to forge these relationships are known as Tamers, individuals who befriend, train, and partner with Digimon in a world that has largely moved on from its digital past.

In this world, a new and ominous threat has emerged in the form of the Spirals. These malevolent entities, controlled by a Hive Mind, manifest between weak points in the Digital World and the Human World, known as Digital Points. The Spirals are not content with merely existing; they actively seek to spread chaos. They often take control of normal Digimon, corrupting them and turning them against both humans and their fellow Digimon. This insidious influence creates a climate of fear and uncertainty, as no one knows when or where the Spirals might strike next.

As a Jumper, you find yourself thrust into this complex and dangerous world with 1000 CP at your disposal.Your actions could tip the balance in the ongoing struggle between the forces of good and the malevolent Spirals.

Starting Location:

Roll 1d6 and see where in the digital world you will start in. or for 50 CP you can choose anywhere in both the digital world and real world.

1.Binary Forest

A sprawling, dense forest where the trees and plants seem to be composed of digital code. The Binary Forest is a haven for data-based Digimon who thrive in its coded environment. It's a place of serenity, but also of mystery, as hidden paths and glitches often lead to secret areas or unexpected dangers. Tamers may find valuable resources or encounter rare Digimon here, though they must tread carefully, as the forest is known to shift and change unexpectedly.

2.Core City

The bustling metropolis of the Digital World, Core City is the central hub where Digimon from all walks of life gather. It's a vibrant place filled with towering skyscrapers made of digital material, neon signs, and constantly shifting architecture that adapts to the needs of its inhabitants. Core City is a place where Tamers can meet powerful Digimon, access information, and trade valuable data, but it's also a hotbed for Spiral activity, with corrupted Digimon lurking in its darker alleys.

3.Fragmented Wasteland

A desolate region that was once a thriving part of the Digital World but has since been torn apart by a massive data corruption event. The ground is cracked and broken, with floating islands of data debris scattered across the landscape. The Fragmented Wasteland is a dangerous place, home to rogue Digimon that have gone feral due to the corrupted data. Tamers venturing here must be prepared for harsh conditions and unpredictable encounters.

4.Cloud Citadel

A majestic city that floats high above the Digital World on vast clouds of data. The Cloud Citadel is home to many flying and holy Digimon who maintain its serene atmosphere. The city's architecture is a blend of classical and digital design, with grand temples and arenas where Digimon train and compete. However, the Citadel is also a strategic location for those who seek to control the skies, making it a target for Spiral invasions.

5.Glitch Mountains
A treacherous mountain range where the very fabric of the Digital World is unstable. The Glitch Mountains are riddled with data anomalies, causing the landscape to shift and change unpredictably. One moment you might be scaling a rocky cliff, and the next, you could find yourself in a completely different area. This instability makes the mountains a dangerous place, but they are also rumored to hold powerful artifacts and ancient Digimon knowledge hidden deep within.

6.Eternal Sea
A vast ocean of digital water that seems to stretch endlessly, the Eternal Sea is a place of both beauty and peril. Beneath its shimmering surface lie countless secrets, including ancient ruins, sunken ships, and powerful aquatic Digimon. The sea is constantly in flux, with data currents that can either carry a Tamer swiftly to their destination or drag them into unknown depths. The Eternal Sea is also a major battleground, as its strategic importance makes it a frequent target for Spiral forces.

7.Data Desert
A vast, arid expanse where the ground is composed of shifting sands made of fragmented data. The Data Desert is a harsh environment, with scorching heat during the day and freezing temperatures at night. Despite its barren appearance, the desert is home to resilient Digimon adapted to the harsh conditions, as well as hidden data caches buried beneath the sands. Ancient, buried structures from a forgotten age of the Digital World lie beneath the dunes, waiting to be discovered by brave Tamers. However, the desert is also a treacherous place where data storms can suddenly arise, disrupting navigation and communication.

8.Shadow Abyss
A mysterious and ominous region deep within the Digital World, the Shadow Abyss is a dark, subterranean labyrinth filled with twisting tunnels and caverns. The atmosphere is thick with corrupted data, and the walls themselves seem to pulse with a malevolent energy. This area is inhabited by dark and virus-type Digimon, many of whom have been tainted by the influence of the Spirals. The deeper one ventures into the Abyss, the more dangerous and unstable the environment becomes.

Races:

Choose one race that you start off as in this world.

Human

You are one of the many humans in this world who have chosen to partner with a Digimon, forging a powerful bond between the digital and real worlds. As a Tamer, you can choose your gender and age freely, allowing you to shape your identity as you embark on this journey. Whether you are young and full of energy, or older with wisdom and experience, your connection with your Digimon partner will be crucial as you face the challenges ahead. Together

Digimon

As a Digimon, you are a digital monster in this world, born from data yet possessing remarkable intelligence and emotional depth that rivals that of humans. Despite your unique appearance and origins, you are capable of complex thoughts, feelings, and connections. Like all Digimon, you don't have a defined gender, as Digimon are generally genderless beings, and your age is tied to your evolutionary stage or level. Whether you start as a rookie, champion, ultimate, or beyond, your experiences and growth will shape your journey in this world.

Origins :

Here, you will decide your background based on the race you've chosen. You have the option to select two origins for humans and three for digimons: one will be your Base Origin, which represents your core identity and foundation in this world, and the others will be your Specialization, which defines the unique skills or abilities you've honed over time.Also any origin can be a drop in.

Humans Tamer Origin

Here, you will decide what kind of Digimon Tamer you will be in this world by choosing one Tamer Origin.

Soul Tamers

As a Digimon Tamer, you've made the deliberate decision to raise only one Digimon, believing that this singular bond is one of destiny or a deep, unbreakable friendship. By focusing all your efforts, care, and training on this one partner, you build a connection that is far stronger than most. Your Digimon becomes a reflection of your dedication, growing more powerful than the Digimon of Troupe Tamers, who may spread their focus across multiple partners.

Troupe Tamer

You've chosen to view and utilize Digimon as tools or an army, believing in strength through numbers rather than a singular bond. By raising multiple Digimon, you prioritize tactical flexibility and strategic advantages over emotional connection. Your Digimon may not share the deep bond that other Tamers form with their single partner, but you more than compensate with your ability to command an array of Digimon in different roles.

Human Specialization

Here, you will choose one specialization that defines how you will command and explore the world as a human Tamer. Your specialization reflects your unique approach and skills in dealing with both Digimon and the challenges of the Digital World.

Digimon Breeder
As a human, you've made it your life's mission to raise Digimon from their earliest stage, starting as Digitamas (Digi-Eggs), and guide them to at least their Champion form. Your goal is to increase the survival chances of wild Digimon and ensure they grow strong in a world filled with danger. This dedication also serves to help you better care for your own Digimon, especially if they ever revert back to Digitamas.

Human Merchant
When you entered the Digital World, your eyes were filled with greed, seeing the untapped potential to make a fortune in this strange, data-driven realm. The countless resources, rare items, and powerful Digimon could all be turned into lucrative opportunities. Whether it's through trading rare digital artifacts, capturing and selling data, or even exploiting the battles and tournaments that the Digital World has to offer, you and your Digimon will have plenty of chances to turn your ambitions into profit. With every venture, your focus is clear: maximize wealth and power in this unfamiliar land.

Digimon General
As a human, you've specialized in the art of war, mastering tactics that allow you to command your Digimon with precision and efficiency in battle. Through intense training and experience, you've learned how to strategize quickly, positioning your Digimon to exploit enemy weaknesses and maximize their strengths. Whether in one-on-one duels or large-scale conflicts, your deep understanding of battlefield tactics gives you an edge, allowing you to outmaneuver opponents and ensure victory.

Digimon Professor
You entered the Digital World with eyes full of wonder, captivated by its mysteries and endless possibilities. Driven by a thirst for knowledge, you've become someone who seeks to explore and learn everything this world has to offer. From the origins of Digimon to the hidden secrets of the Digital World's landscapes, your journey is one of discovery. Every new Digimon you meet, every location you explore, and every piece of data you uncover fuels your desire to understand this strange and fascinating realm, making you a true scholar of the Digital World.

Digimon Origin
Here, you will decide if you are native to the Digital World or born in the Human World.

Partner Digimon
As a Digimon, you were born—or more precisely, your Digitama reformed—somewhere in the Human World. This unique origin has given you a deeper understanding of how humans live, think, and operate, making you more calm and reasonable compared to your wild Digimon cousins from the Digital World. Because of your exposure to humans early on, you've learned to navigate their world and emotions, which makes you more approachable and cooperative. Digimon like you are more likely to form bonds and friendships with humans, bridging the gap between the two worlds and fostering stronger partnerships.

Wild Digimon
You are a Digimon raised in the wild lands of the Digital World, far removed from the influence of humans and their partnerships with Digimon. Unlike partner Digimon, your type is more wild and primal, driven by instinct rather than tactics. You may lack the strategic finesse of Digimon who fight alongside human Tamers, but in exchange, you possess greater stamina and raw power. Your strength is born from survival in the harsh Digital World, where only the toughest endure. Digimon like you tend to be more hostile towards humans, often viewing them as outsiders or threats, making you less likely to bond with them and more inclined to rely on your own fierce independence.

Digimon Specialisation
Here, you will choose two specializations to determine what species of Digimon you are. Each combination of specializations will shape your abilities, background, and how you interact with both the Digital and Human Worlds.

Common Digimon
You are part of the most frequently encountered species of Digimon, with a balance of power, intelligence, and adaptability. Common Digimon thrive in both wild and tamed environments, and your versatility allows you to fit into a variety of roles.

Artificial Digimon
Created through digital data manipulation or human intervention, Artificial Digimon are highly advanced, with a unique structure and purpose. They often possess enhanced intelligence and the ability to evolve rapidly, adapting to different situations with ease.

Black Digimon
A darker variant of regular Digimon, Black Digimon are often more aggressive and ruthless, with a connection to shadowy data. These Digimon possess unique abilities that set them apart from their counterparts, often with enhanced combat skills and resilience.

X Digimon
Infected or modified by the X-Antibody, X Digimon possess increased power and survival instincts. The X-Antibody grants them immunity to certain forms of data corruption and enhances their abilities, making them stronger and more dangerous than their normal counterparts.

Holy Digimon
They are a rare and revered species within the Digital World, often seen as protectors of balance and peace. They are imbued with sacred powers, drawing strength from light and purity, and are typically tasked with battling against dark forces or evil Digimon that threaten the Digital World. Holy Digimon often possess abilities to heal, purify, and defend, making them natural leaders in times of crisis. Their strength isn't just in combat, but also in their ability to inspire hope and unity among Digimon and humans alike.

Evil Digimon
Driven by malicious intent or dark forces, Evil Digimon are powerful, ruthless, and relentless. They often seek destruction or domination, using their strength and cunning to overwhelm enemies. These Digimon can also manipulate others to achieve their goals, making them formidable foes.

Perks:

Here, you will choose the perks you'll gain while in this world. These perks enhance your abilities and experience based on the origins you've selected.

Perks based on your chosen origins will always be discounted with 100CP one for free, offering benefits tailored to your specific species or role, making it easier to enhance your strengths. However, General Perks—those that can be only taken by the origin species —are not discounted and can only be obtained by the species you initially chose.

Human General Perks

Digisoul[Free]

Deep within your soul lies a Digisoul, a powerful manifestation of your emotions that grants you immense potential. Digisoul is the essence of an individual's emotions, capable of unlocking limitless strength and abilities. When harnessed, it appears as a glowing, pixelated aura that flickers like flames. In its early stages, Digisoul typically manifests around one of your hands, but as you tap into larger quantities, the aura envelops your entire body. This visual display is not only striking but also a sign of the immense power surging through you, especially when your emotions are heightened or uncontrolled.

In addition to its visual impact, Digisoul enhances your physical capabilities far beyond your normal limits. When fully activated, it increases your strength to the point where you can shatter the ground with a single punch or destroy heavy machinery with ease. This raw power, fueled by your emotions, gives you an advantage in battle and allows you to push past your physical boundaries. Whether used in controlled bursts or overwhelming surges, Digisoul represents the untapped potential within, offering you the means to overcome even the toughest obstacles.

Digital Body Conversion[Free]

Your body seamlessly adapts to the Digital World, converting into data, composed of 0s and 1s, much like a Digimon's biological structure. This transformation allows you to fully function in the Digital World as if you were a native Digimon. You can now eat and drink digital sustenance, and your body will process it in the same way Digimon do. This adaptation also allows you to endure the unique conditions of the Digital World, from its strange environments to the data-based effects that would normally harm or confuse a human body.

In the real world, this conversion into data grants you extraordinary abilities. You can hit with force that rivals a Digimon's, and in some cases, even fuse with a Digimon.

Tamer Rank [Varied]
Here, you will decide what Tamer Rank you will start with in this world. The higher your rank, the stronger your Digisoul and the more powerful Digimon you can support by evolving or recruiting them from the wild.

Normal Rank [Free]
At this rank, your Digisoul allows you to support and recruit Rookie-level Digimon, offering a solid start as a tamer. You will be able to grow alongside your Digimon partner from the beginning stages.

Bronze Rank [100 CP]
At this rank, your Digisoul is slightly more powerful than the average tamer's, enabling you to support and recruit Champion-level Digimon. Your partnership becomes stronger as your Digimon reaches a higher evolution stage**.**

Silver Rank [200 CP]
At this rank, you have reached the elite level of tamers. Your Digisoul allows you to support and recruit Ultimate-level Digimon, marking you as a capable and respected figure in the tamer world.

Gold Rank [400 CP]
At this rank, you are one of the top elites. Your Digisoul can now support and recruit Mega-level Digimon, beings of immense power, once thought to be close to god-like in strength.

Platinum Rank [600 CP]
At this rank, you are among the most powerful tamers in the Digital World. Your Digisoul is capable of supporting and perhaps even recruiting Digimon of the mythical Ultra-level, the highest form of evolution rumored to exist. This places you among the most legendary figures in the tamer world.

Soul Tamers

The One Partner [100CP/ Troupe Tamer pay 200CP]

Your Digisoul is uniquely powerful and finely tuned to nurture the growth and stability of a single Digimon. This means that, while you can only raise and maintain one Digimon, the bond you share with that Digimon will be unparalleled. Your Digisoul will accelerate their growth rate far beyond normal limits, granting exceptional development in strength, abilities, and evolution. The connection you share ensures that your ability to raise and support this Digimon surpasses that of any ordinary Tamer. At the start of your journey, you must choose one Digimon to become your lifelong partner, and they will receive all the extraordinary benefits of your mighty Digisoul. This chosen Digimon will grow to new heights, becoming a reflection of your own power and determination. ***Troupe Tamers requires to pay 200CP to buy any perks in the Soul Tamers section.***

Emotional Connection [100CP]

You and your partner Digimon are now in perfect harmony, fully synchronized in mind, body, and spirit. This deep connection means that you both instinctively understand each other, often acting as one during battles and decisions. Your bond creates a profound devotion between you and your Digimon, allowing you to predict each other's thoughts and actions with ease. Beyond this, your strong connection also extends to others around you, enabling you to forge deeper, more personal bonds with other Digimon and people.

Tamer Crest [200CP]

Deep within your Digisoul lies a crest, much like the legendary Tamers of old. These crest represent your strengths and embody the core values that define you, such as courage, love, friendship, or wisdom. However, they also reveal your weaknesses, reflecting the areas where you struggle or need to grow. As you remain true to yourself and strive to overcome your flaws, your crests will guide you toward personal development. The more you mature, both emotionally and mentally, the stronger your Digisoul will become, enhancing your abilities and allowing you and your partner Digimon to grow even more powerful together. Your journey is one of constant self-improvement, with each step forward making your Digisoul—and your bond with your partner—more formidable.

No Misshapps[200CP]
Dark Evolutions often occur when a Tamer is overwhelmed by negative emotions—grief, betrayal, or anger—that seep into their connection with their Digimon during evolution. These evolutions can twist Digimon into destructive, corrupted forms, driven by the Tamer's unstable emotional state. However, with this new resilience, your Digisoul and abilities are now heavily shielded against such negativity. This protection significantly reduces the chance of a Dark Evolution occurring, even during moments of extreme emotional turmoil. Your connection to your Digimon is now fortified, ensuring that your emotions don't compromise your partner's growth or lead them down a darker path.

Warp Evolution[400CP]
Warp Evolution allows your partner Digimon to bypass intermediate stages, evolving directly from Rookie to Mega level in an instant. This ability is a significant advantage in battle, saving precious time when every second counts. The duration of this evolved form depends on the strength of your DigiSoul, with regular Tamers maintaining the evolution for a few minutes, while more experienced Platinum Tamers can sustain the Mega form for up to three days and three nights. Your DigiSoul's strength will determine how long your Digimon can stay at their most powerful state, giving you a massive edge in critical situations.

Digiheal[400CP]
Your Digisoul now possesses the ability to heal any Digimon, providing a powerful source of restoration during battle or in times of need. While this healing ability works on any Digimon, it is significantly more potent when used on your partner Digimon, allowing them to recover faster and more fully. Whether it's restoring stamina, mending wounds, or curing ailments, your Digisoul acts as a lifeline but this does drain your stamina more when healing digimon above the level your digisoul can handle.

Burst Mode [600CP]
Your Digisoul is now blazing with power grants your Digisoul immense power, allowing your partner Digimon to reach Burst Mode, regardless of their current maximum evolution level. In this enhanced state, your Digimon's power rivals or even surpasses that of Mega-level Digimon, and their form undergoes a dramatic transformation, reflecting their increased might. Additionally, your Digivice evolves into a Burst Digivice, amplifying its abilities and unlocking new potential for you and your Digimon. This transformation is a symbol of your bond and strength, giving your Digimon a massive surge of power when it's needed most.

Matrix Evolution [600CP]
You now possess the ability to fuse with your Digimon, similar to the Fusion Dance in *Dragon Ball*, allowing you both to evolve into the highest Digimon level you can currently sustain. This fused form combines the best traits, abilities, and strengths of both you and your partner Digimon, making you significantly more powerful than any Digimon of the same species or level. Furthermore, your fused form has an Alter Form, which drastically increases your power but also significantly reduces the duration you can maintain the fused state. This transformation represents the ultimate synergy between you and your Digimon, unlocking untapped potential and making you a force to be reckoned with.

Troupe Tamers

One Of Many [100CP/Soul Tamers pay 200 CP]

You are a unique Tamer who refuses to limit your bond to just one Digimon partner. With a well-trained Digisoul, you can now support up to six Digimon in active combat simultaneously. While your individual Digimon may remain within the normal range of power for their species and level, the ability to manage and raise multiple partners at once offers immense versatility. You can strategize with diverse abilities and powers from your Digimon team, making your collective force far more effective in battle. This allows you to cover weaknesses, create powerful combinations, and outmaneuver your enemies with a wide range of tactics. ***Soul Tamers requires to pay 200CP to buy any perks in the Troupe Tamers section.***

Prepared For Many [100CP]

You now possess the ability to manage and care for all the Digimon under your guidance, regardless of their unique personalities. Just like humans, Digimon have diverse temperaments, but your deep understanding allows you to navigate their individual quirks and needs with ease. Whether they're stubborn, timid, or fiercely independent, you can maintain harmony within your team. Furthermore, from the back line, you can effectively command your Digimon in battle, giving clear and coordinated instructions that ensure order and synchronization.

Recruiting [200CP]

You now have an easier time recruiting Digimon into your ranks, thanks to the strength and charisma of your Digisoul. Your words and actions naturally pique the interest of any Digimon you wish to recruit, drawing them toward your cause. While some Digimon may be easily convinced to join you through conversation or shared goals, others might demand more. Some may require you to engage them in battle to prove your strength, while others might set you on an epic quest—whether it’s finding a rare artifact or even something as quirky as making the perfect delicious burger.

The Top 1%[200CP]
As a Tamer, you now possess the ability to scan and assess a Digimon, determining whether it has the potential to reach the coveted Mega level. This is a valuable skill, as only 1% of Digimon can naturally evolve beyond the Ultimate level to become a Mega. With this perk, not only can you identify those rare Digimon, but you also have a higher-than-average chance of encountering such exceptional Digimon during your journey. This gives you a unique edge in assembling a team of Digimon with unparalleled growth potential.

Digimon Hunter [400CP]
You now possess advanced tracking skills, allowing you to locate any Digimon or digital lifeforms, whether they reside in the human or digital world. Beyond just tracking, you also have the expertise to craft specialized traps and baits to lure and capture Digimon. The effectiveness of your traps and bait depends on your tamer rank, meaning that as you improve, your traps become more intricate and potent.

Absoluto Command [400CP]
It is challenging for others to defy you, even when you're viewed unfavorably. Your presence commands respect and awe. While those with strong resolve can resist your influence, individuals with average determination often comply with your directives in your presence, and those with weaker willpower obey your every command, even in your absence.

Subordinates find it nearly impossible to disobey your instructions, except in the most extreme situations. Pets follow your lead without hesitation, and even your equals yield to your decisions.

DNA Digivolution [600CP]
Your DigiSoul now grants you the ability to initiate DNA Digivolution between two Digimon under your command. The restriction is that both Digimon must be of the same level, and the resulting evolution will be to the next stage in the evolutionary chain. Your tamer rank must also be capable of supporting the level of the Digimon resulting from this fusion. This evolution is permanent and cannot be undone.

The outcome of the DNA Digivolution is influenced by the base attributes and training of the two Digimon involved. For example, if you combine two

Champion-level Greymon who have been raised and trained to their peak, the resulting Ultimate-level RiseGreymon will possess enough power to contend with low-level Mega Digimon on even ground.

Taint of The Dark Area [600CP]
Your DigiSoul has been corrupted by the sinister power of the Dark Area, granting you the ability to open portals to the Digital World's equivalent of hell—the Dark Area—from either the digital or human world. This taint has not only enhanced your physical and mental capabilities, turning you into a genius in any field you focus on, but also bestowed upon you the power to create items known as Evil Rings.

These Evil Rings allow you to control any Digimon within the limits of your Tamer rank, binding them to your will. With this newfound power, you can influence and manipulate Digimon far beyond the normal scope, expanding your control over the Digital World.Also you can control and force your digimon to dark digivolution where your digimon will evolve into a dark and evil version of their next level but the power level is order of magnitudes more powerful than normal.

Digimon Breeder

Healthy Hatching [100CP]

Your DigiSoul possesses a unique power that ensures any Digitama under your care will hatch into a healthy and thriving baby Digimon. Normally, there is a chance for a Digitama's data to become corrupted during the rebirth process, leading to malformed or unstable creatures made of dead data, which are usually recycled back into another Digitama. However, your DigiSoul actively prevents such corruption, safeguarding the precious data within each Digitama, ensuring a pure and successful rebirth every time.

Raising Digimon 101 [100CP]

Your experience and DigiSoul now allow you to effortlessly care for and nurture Baby 1, Baby 2, and Rookie-level Digimon without any complications. You possess the skills and knowledge to provide them with the care they need, ensuring they grow up strong, healthy, and well-adjusted. Whether it's feeding, or protecting them, you can guide these young Digimon through their early stages of life with ease, fostering their development into capable and powerful partners.

How to Grow food [200CP]

In the Digital World, not everything is as it appears, with trees bearing cakes and meat growing from the ground. Your DigiSoul now grants you the ability to replicate these strange plants, allowing you to grow any type of food you desire. You can choose to plant trees that, after a few months, will produce bags of chips, sandwiches, or cup noodles every day. Alternatively, you can cultivate vegetables that can be harvested every few days, though they yield less and will need to be replanted. The choice is yours—abundant, daily snacks or periodic harvests of digital delicacies.

Training Schedule [200CP]
You now possess the knowledge to design the optimal training and diet regimen for your Rookie-level Digimon, ensuring it evolves into the desired Mega-level species, as long as it has the potential. For instance, if you aim for your Betamon to become the Mega-level MetalSeadramon, you would focus its training on enhancing speed, agility, attack, and defense. Additionally, you'd feed your Betamon a substantial amount of Metal Empire and Deep Savers-type data. There would also be unique requirements, such as ensuring it spends 90% of its life in or near a water habitat, to reach its destined form.

Digital Chef[400CP]
You are now a skilled chef, capable of crafting a variety of sweets and snacks tailored to Digimon tastes. But more than that, you can infuse these dishes with the necessary data to help Digimon reach the desired evolutionary stage. For example, if you wish to evolve a Gabumon into a Garurumon, you'd incorporate Nature Spirit data into its meals. To gather this data, you would need to hunt and scan Digimon from the Nature Spirits field, allowing you to create specialized foods that guide their evolution path. Your culinary talents are now a vital part of your Digimon's growth.

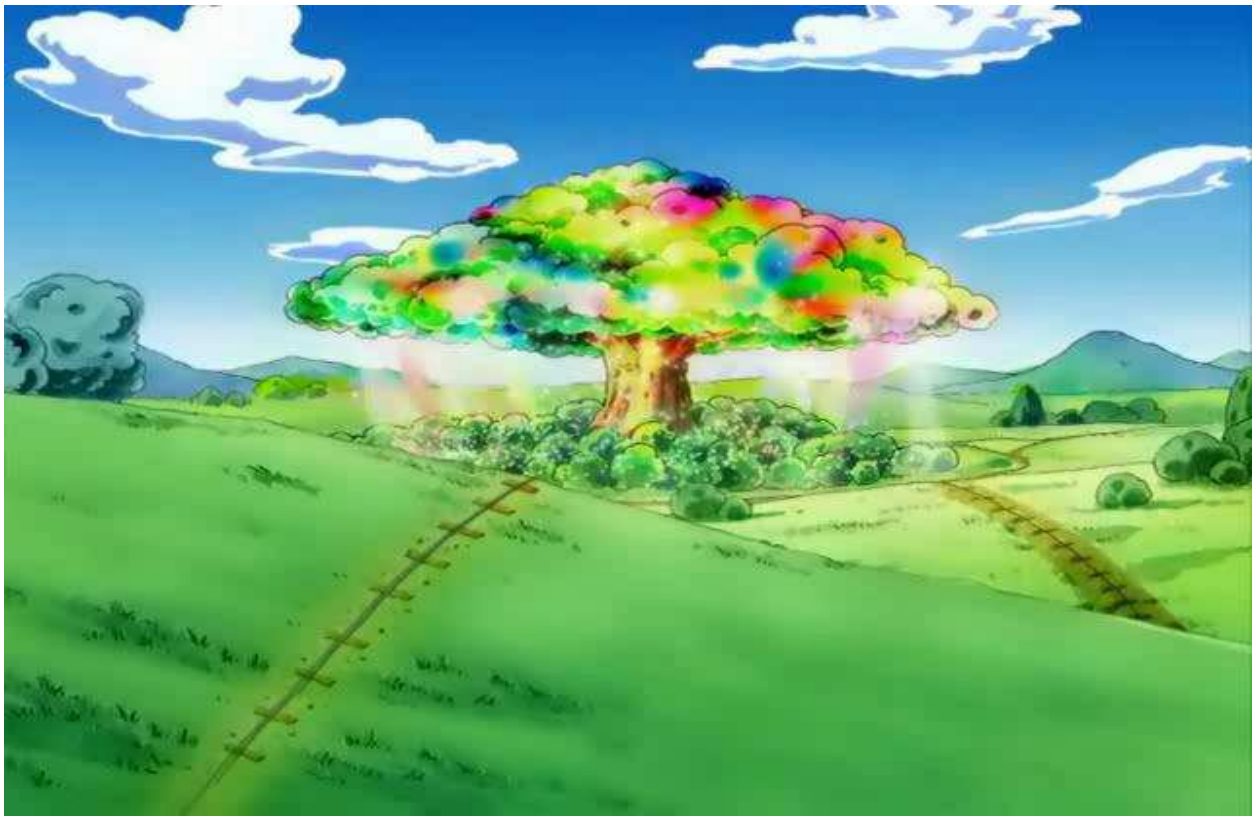

Twin Digimon [400CP]
Your Digisoul now holds the power to influence the birth of Digitama, granting a chance for any Digitama in your care to hatch twin Digimon. These twin Digimon possess a higher likelihood of reaching their Mega-level evolution. Raising these special Digimon offers you not only two companions but also a greater potential for powerful growth, making them exceptional partners in your journey.

Gym Builder[600CP]
You now possess the ability to create gym equipment tailored for Digimon, ranging from the weakest Baby 1 stage to the most powerful Mega-level Digimon, allowing them to use the equipment without difficulty. These pieces include standard gym items such as dumbbells and treadmills, each capable of enhancing a specific stat for the Digimon. Additionally, you have the insight to design optimized training regimens for your Digimon, significantly reducing the time needed for them to achieve their desired growth. Furthermore, you can construct training areas where your Digimon can battle without risk, as the gym absorbs any damage dealt during these training sessions, ensuring their safety.

Village Of Beginnings [600CP]
You now have the ability to establish a mini server within the human digital network, allowing you to create a smaller-scale version of the Village of Beginnings. This server continuously absorbs data from the vast expanse of the World Wide Web, drawing upon a wealth of information to nurture and generate new Digimon. Over time, this server will produce Digitama at a steady rate of one per month, ensuring a constant influx of potential partners for your adventures.

Initially, the server can hold a maximum of ten Digitama, providing you with a diverse range of options for your team. In its early stages, the server can also support up to twenty Rookie-level Digimon, giving you ample room to train and develop these digital creatures. As you invest time and effort into improving the server's capabilities, you will be able to expand its capacity, allowing for even more Digitama to be stored and cared for.

With diligent training and growth, your server will evolve to accommodate not only more Digitama but also a greater variety of Digimon, including those at the Mega level.

Human Merchant

Digital Equipment and potions [100CP]

You now possess the extraordinary ability to harness digital data from the world around you, converting it into a wide array of items for Digimon to use . This capability allows you to create powerful weapons, sturdy armor, and versatile accessories tailored to enhance a Digimon's abilities in battle. Additionally, you can fabricate consumable items like potions that provide healing, buffs, or other effects, ensuring anyone is always well-equipped for any challenge.

Money Converter [100CP]

You now possess the ability to seamlessly convert any currency you receive into another at a fixed, guaranteed rate, ensuring that no value is lost in the process. Whether you're converting digital world currencies like Bits into real-world money such as USD, or transferring USD into Bits, the conversion remains stable and accurate. This power is especially useful when navigating between the human and digital worlds, as it allows you to manage your finances with ease and efficiency, without worrying about fluctuating exchange rates or hidden fees.

Charisma of a Merchant[200CP]

As a merchant, you now possess the uncanny ability to convince others with ease, turning even the most reluctant individuals into willing customers. Whether you're selling rare Digimon items, negotiating trades, or bartering for services, your words flow with persuasive charm, making your offers appear irresistible. This heightened charisma allows you to build trust quickly, fostering long-lasting business relationships while maximizing your profits and benefits. Your natural skill in reading people also grants you the insight needed to understand what others desire, allowing you to tailor your sales pitch or deal to their specific needs.

Higher Quality [200CP]

Your products stand out as superior when compared to similar items in the market, as Lady Luck has blessed you with a unique boon. Items that you craft yourself turn out to be of higher quality 25% of the time, resulting in more durable and efficient goods. Additionally, when dealing with vendors or suppliers, you seem to attract reputable sources, ensuring that most of the items you procure and resell are of better quality than what your competitors offer.

Low Production Cost [400CP]
It seems you've gained a valuable advantage in your production and purchasing processes. Now, the cost of both crafting items and buying materials has been reduced by 25%. This allows you to produce goods more efficiently and at a lower expense, giving you a significant edge in the market. You can offer competitive pricing or increase your profit margins, making your business more sustainable and successful in the long run.

Seasonal Items [400CP]
You now possess the ability to craft and sell seasonal items that are sure to be a big hit with your customers. For example, in the summer, you could offer yukata or swimsuit-themed armor and accessories that boost resistance to heat or improve swimming abilities. Your weapons can also be designed to fit the season, such as swords disguised as umbrellas or guns that resemble water guns.

Additionally, you can cater to holidays by creating themed merchandise. For Valentine's Day, you could produce and sell chocolate that functions as a healing potion. These items, designed to fit the seasonal spirit, will captivate your audience and boost your sales, ensuring a constant flow of demand all year round.

Digimon Farm[600CP]
You now have the ability to create and program a highly sought-after feature for tamers: Digimon Farms. These digital farms, which can be installed into a tamer’s digivice, are essential tools for passively training any Digimon that the tamer keeps in reserve. Each farm can be customized with various themes, influencing the type of data Digimon will absorb. For instance, a city or junkyard theme will allow Digimon to absorb Metal Empire data. Additionally, tamers can choose the background music (BGM), which affects the rate at which their Digimon gain experience. For example, rock and roll music will increase the experience gained by Digimon of the Metal Empire field.

These farms can be further customized with expansions that increase the number of Digimon they can hold and enhance the training process. You sell these expansions separately, offering a range of themes and BGMs tailored to specific Digimon types and training goals. Initially, the farms you create are barren and can hold up to 10 Digimon at once. A single tamer can carry up to three farms on their digivice, but with your growing expertise in compressing data size, you can expand this capacity, allowing tamers to carry even more farms and manage a larger number of Digimon effectively.

Digital Cards [600CP]
You now possess the capability to create special digital cards that contain the data and abilities of various Digimon. With these cards, tamers can imbue their Digimon with powers or items typically exclusive to other species. For example, you could craft a card that grants Terriermon the ability to wield Zudomon's hammer, or allow Renamon to unleash Greymon's Mega Flame attack. These cards are reusable and require a specialized Digivice add-on that scans and integrates the card's data into the Digimon. You can easily create and sell both the cards and the Digivice add-ons.

To produce these powerful cards, you or your customers must actively hunt down the specific Digimon whose abilities you wish to capture. By collecting the necessary data from these Digimon, you can then craft digital cards that are unique and tailored to the customer's needs

Digimon General

Flash Of Inspiration [100CP]

In battle, you now experience sudden flashes of inspiration on how to approach an enemy for victory. These ideas might seem unorthodox or even goofy, but they often lead to unexpected and effective tactics. Whether it's using the environment in quirky ways, pulling off an unusual combination of attacks, or exploiting a weakness that no one else noticed, your spur-of-the-moment insights give you an edge in combat. This ability can turn the tide of battle, even in the most dire situations.

Formation[100CP]

You now have the ability to drill various combat formations into the Digimon under your command. Whether it's offensive, defensive, or strategic maneuvers, you can train your Digimon to seamlessly execute complex formations that enhance their teamwork and effectiveness in battle. These formations allow your Digimon to coordinate attacks, protect weaker allies, and adapt quickly to changing battle conditions. With practice, your Digimon will be able to shift between formations with precision, giving you a tactical advantage over opponents.

Optimal Gear [200CP]

You now have the ability to determine which type of gear is optimal for each Digimon under your command. This knowledge allows you to tailor their equipment perfectly, enhancing their strengths and covering their weaknesses. When your Digimon use the recommended gear, it becomes around 35% more effective, boosting their combat abilities, defense, or support skills significantly. This optimization ensures your Digimon are always equipped to perform at their peak potential, giving you a crucial edge in battle.

Survivalist[200CP]

You have the ability to thrive in the wild, with a keen understanding of what is safe to eat, how to hunt, build shelter, and identify secure terrain. Additionally, your resourcefulness allows you to quickly adapt to any new or unfamiliar environment, even those with unusual or unpredictable physical laws.

Frontliner[400CP]
Your Digisoul has now manifested in a way that allows you to actively fight alongside Digimon on the front lines. Depending on your Tamer rank, your physical attacks can harm and even pierce the wireframe of any Digimon your rank can support. As an added bonus, you've mastered the use of one weapon of your choice—or, if you prefer, you can simply punch them incredibly hard. Either way, your attacks will pack a powerful punch.

Backliner[400CP]
It seems that through your Digisoul, you can now conjure simple elemental attacks using the surrounding data. The raw power of these attacks depends on your Tamer rank. However, aside from the strength of your attacks and your ability to aim, you're limited to striking from the backline, with little control over advanced techniques or strategy**.**

Digixros[600CP]
It appears that your Digisoul has been enhanced by otherworldly powers, granting you the ability to perform DigiXros, allowing you to combine multiple Digimon into a single, more powerful form. You can choose one Digimon as the core, and the resulting form depends on how many Digimon are involved. For example, combining two Digimon would create "Digimon X2," while fusing seven Digimon would result in "Digimon X7." These new forms possess strength far beyond the sum of their parts, making them formidable in battle.

Unlike DNA Digivolution, DigiXros is not permanent, and the Digimon will revert to their original forms once the fusion ends. However, the process comes with a significant risk. You must carefully choose the core Digimon, as they must possess the physical and mental capacity to handle the combined power of the new form. If the core Digimon cannot maintain control over the DigiXros, the form will collapse, causing severe physical and mental harm to the core Digimon.

Hacker [600 CP]
You now possess the ability to manipulate and hack into items, programs, or systems, forcing them to deviate from their original programming to suit your needs. Whether it's modifying a Digivice, overriding a digital firewall, altering a Digimon's data, or reprogramming a server, you can now bypass security protocols and rewrite the code to align with your own objectives.

This skill allows you to bend technology to your will, giving you an edge in both the digital and human worlds. You can hack into systems with precision, turning them into powerful tools to assist you in battle, alter data flow, or even unlock hidden functions that were never intended to be accessed. The ability is flexible, allowing you to hack into a wide variety of systems, whether they are small devices or large-scale digital infrastructures, enabling you to control technology to your advantage.

Digimon Professor

Super Intellect [100CP]
you are now an exceptionally intelligent researcher, possessing vast knowledge about Digimon lifestyles, their species, characteristics, and behaviors. You can accurately assess the strengths, weaknesses, and potential evolution paths of Digimon, as well as their compatibility with various Tamers. Additionally, you have a deep understanding of how easily Digimon can be recruited or bonded with by different types of Tamers.

As a bonus, you can effortlessly communicate this complex knowledge to others, whether explaining it clearly to a group in person or sharing your insights online. You have a fun and engaging way of breaking down intricate information, making it accessible and easy to understand for people of all experience levels, from newcomers to seasoned Tamers.

Work Ethics [100CP]
You now possess an incredible work ethic, allowing you to focus and maintain productivity at optimal levels. Whether you're tackling a project, managing tasks, or engaging in complex research, your discipline ensures that you see things through to completion efficiently and effectively. Your sense of responsibility and dedication to your work inspire those around you.

Interviewer [200CP]
You have a natural talent for interviewing others, making them feel comfortable and open to sharing their thoughts, experiences, and insights. Whether you're gathering information, conducting research, or recruiting Digimon, you can ask the right questions to get valuable and relevant responses. This skill extends to handling difficult or sensitive topics with care, ensuring that your interviews are both engaging and informative.

Access to Places of Knowledge [200CP]
You now have privileged access to places of knowledge—libraries, archives, research labs, and even restricted digital databases—wherever you go. These locations are filled with valuable information on a wide range of subjects, from Digimon species and evolution paths to advanced technological data and

strategic battle tactics. With this access, you can easily conduct in-depth research, find rare data, and expand your expertise with minimal obstacles.

Digital Network[400CP]
You now have the ability to create a social network that bridges the gap between Digimon and humans. This network allows for seamless communication and the sharing of information, strategies, experiences, and resources between tamers and their Digimon partners. Both humans and Digimon can post, chat, and even form communities within this network, promoting cooperation and camaraderie. It can also be used to organize events, share evolution tips, battle strategies, or even request help during difficult missions.

Digivice Creator[400CP]
You now have the remarkable ability to create and upgrade Digivices for other Tamers, fostering bonds between humans and Digimon. Your crafted Digivices not only enable the evolution of Digimon and serve as a location tracker for their partners, but also possess advanced features. These include a powerful light capable of banishing possessive spirits or malevolent energies, and the ability to generate a temporary but impenetrable shield for protection. Additionally, you can update existing Digivices with new features or enhancements and repair any that are broken, ensuring that Tamers and their Digimon are always connected and empowered.

Artificial Digital Creator[600CP]
You possess the extraordinary ability to create artificial digital lifeforms. These entities can take many forms, from fully realized Digimon to other digital creatures like Spirals, which can corrupt and alter existing data, or Digignomes, small beings designed to transport and manage data within the Digital World. Your mastery over digital creation allows you to build these lifeforms with specific functions, attributes, and personalities, tailored to suit your needs or the tasks you set for them. This power offers a limitless potential for creativity and innovation within the digital space, though it comes with its own set of ethical dilemmas.

Not only can you replicate or modify existing Digimon species, but you can also design entirely new, artificial Digimon. These custom Digimon can possess abilities and traits based on your desires, whether for combat, research, support,

or utility. For example, you could create a Digimon that excels in gathering data from the digital environment or one with an impenetrable defense to serve as a personal bodyguard. These artificial Digimon can follow traditional evolution paths or be programmed with unique growth stages that align with your vision, giving you unparalleled control over their development.

However, with great power comes scrutiny. Some might question the ethics of creating artificial lifeforms, particularly if they blur the line between digital autonomy and servitude. Your creations could challenge the natural balance of the Digital World, and their existence might raise concerns about the impact of tampering with digital life.

Anti Digimon Weapons[600CP]
You now have the ability to create a variety of specialized weapons with profound effects on the Digital World. One of your most dangerous creations is a type of weapon that can prevent Digimon from reincarnating. Normally, when a Digimon is defeated, their data is dispersed and eventually reconstituted in the form of a Digitama, allowing them to be reborn. However, with these weapons, you can disrupt that cycle, completely destroying their data and preventing them from ever coming back. This power is highly dangerous and carries serious ethical implications, as it permanently removes a Digimon from existence.

In addition to these powerful weapons, you can also create bombs with the ability to open digital gates between the real world and the Digital World. These bombs, when detonated, tear through the fabric of reality and allow for instant travel between both worlds. This capability can be used to transport yourself, allies, or enemies across dimensions, making them invaluable for escaping dangerous situations or launching surprise attacks. However, their destructive nature can also destabilize the balance between the two worlds, so they must be used with caution.

Digimon General Perks

Digimon Biology [Free]

In this world, you will be given the body of a Digimon. But you might be wondering—what exactly makes a Digimon different from most other living beings? Well, a Digimon's body is composed of three distinct layers:

The Outer Layer

This layer acts like the skin or clothing of a Digimon. It determines whether you will appear furry, slimy, or even fully armored. The texture gives each Digimon its unique appearance, and its composition affects how a Digimon interacts with its surroundings.

The Wireframe

Beneath the texture is the wireframe, which functions as the skeleton. This wireframe determines the overall size and shape of your digital body. It controls your movements and provides structure, much like bones do for living creatures in the real world.

The DigiCore

The most important part of you as a Digimon is your DigiCore. Located at the center of your body, the DigiCore serves as your heart and brain, housing your primary data and controlling all of your vital functions. It is said to be the equivalent of a soul for Digimon. As long as your DigiCore remains intact, you can continue to function indefinitely—even if the rest of your body is damaged or destroyed. However, if your DigiCore is harmed or lost, it would be life-threatening, and you would cease to function entirely.

Digimon Evolution [Free]

As a Digimon, you now possess the ability to evolve into higher forms through a process fueled by your DigiCore. Your DigiCore, the essence of your being, absorbs data from various sources—whether it be the food you consume, the environment you inhabit, the experiences you gain, or even the data from defeated Digimon. As this data accumulates, your DigiCore will eventually reach a critical mass. At that point, it will integrate the absorbed data, allowing you to evolve into a new, more powerful form with enhanced abilities.

The higher the level you aim to evolve into, the more data is required, with each evolution demanding an exponentially greater amount. For a wild Digimon, this

process is gradual and requires sustained effort, but for a partnered Digimon with a Tamer, the presence of a strong Digisoul can accelerate the evolution process. In such cases, a Tamer can intervene and trigger your evolution into the appropriate level, bypassing some of the immense data requirements that would otherwise be necessary.

Digimon Levels[Varied]
In this Digimon world, you have the opportunity to choose your starting level, which determines your current power and potential for growth. After careful consideration, you can select one of the following levels:

Baby I [+600CP]
The most basic form of a Digimon, freshly hatched from a digitama. Digimon at this level are extremely weak, with no real means of defense beyond spitting bubbles. They are vulnerable and reliant on others for protection until they can evolve.

Baby II [+400CP]
A step above Baby I, these Digimon have a bit more ability to defend themselves, possibly spitting more potent bubbles or even small flames or seeds. While still weak, they have the potential to train and evolve faster than in their previous stage.

Rookie [Free]
The most common stage for partnered Digimon, where they start to truly live independently and fight seriously. While there can be significant power differences between Rookies, this level allows you to begin actively participating in the world, and it serves as the foundation for future growth.

Champion [200CP]
This is a powerful level where Digimon become more formidable. They have evolved beyond the Rookie stage and have significantly increased combat capabilities. Many Digimon choose to stay at this level for long periods, relying on their newfound strength.

Ultimate [400CP]
Known as the "Perfect" form, this stage marks the height of most Digimon's potential, as very few reach the Mega stage. Ultimate-level Digimon are

immensely strong, able to fight toe-to-toe with some of the most powerful entities in the Digital World.

Mega [600CP]
The pinnacle of most Digimon's evolution. Mega-level Digimon possess godlike power, often capable of destroying entire planets or dimensions. They represent the ultimate goal for most Digimon seeking strength, though there is a mythical level beyond this, Ultra.

Digimon Fields [100 CP Each/ First One Free]
In the Digital World, Digimon are grouped into distinct Fields, which determine not only their evolutionary paths but also the types of environments they thrive in. Each Field offers advantages in its associated habitats and boosts combat potential in these environments. Selecting a Field will shape your Digimon's strengths and natural affinities. Each Field costs 100CP, and you may select one or more to enhance your adaptability. Here's a breakdown of the available Fields:

Nature Spirits
This Field is home to Digimon that resemble generic monsters or beasts. Nature Spirits include Digimon that thrive in natural, open environments like grasslands, mountains, and canyons. As a Nature Spirits Digimon, you gain an affinity for rugged landscapes, and you'll evolve into powerful creatures that often resemble wolves, lions, or other terrestrial beasts. Your strength and speed increase in such habitats, allowing you to move and fight more effectively in natural terrain.

Deep Savers
Aquatic and ice-related Digimon populate the Deep Savers Field. This includes fish, marine mammals, and other water creatures, along with some Digimon that dwell in cold, icy regions. Whether navigating the depths of the ocean or crossing arctic tundras, Deep Savers Digimon have enhanced abilities in water-based or freezing environments. You'll excel in combat near bodies of water, swimming effortlessly while others struggle. Ice-based attacks and underwater speed give you a natural advantage in both the sea and frozen landscapes.

Nightmare Soldiers
Digimon in the Nightmare Soldiers Field are often associated with darkness, spirits, and supernatural creatures like vampires, werewolves, or demons. This

Field includes Digimon based on traditional Halloween monsters and Japanese youkai. As a Nightmare Soldier, you are attuned to cursed, haunted areas, thriving in darkness or spiritually charged locations. Your powers often include darkness manipulation, fear-inducing abilities, or soul-related attacks, making you formidable in eerie or shadowy environments.

Wind Guardians

The Wind Guardians Field is made up of Digimon that represent the elements of air, wind, and sometimes plant life. These Digimon often resemble birds, flying creatures, or plant-based organisms. Wind Guardians Digimon are at home in the sky, forests, and other elevated or open-air locations. Your advantage comes from your aerial agility and control over wind-based abilities. Forests also enhance your powers, as your connection to nature and the wind allows for unparalleled movement and strategic flexibility.

Metal Empire

This Field is comprised of machine, cyborg, and mechanical Digimon. Metal Empire Digimon are the rulers of urban, industrialized environments like cities, factories, and mechanical wastelands. Your form may consist of metals, circuits, or weapons, giving you a significant boost in any technologically advanced setting. As a Metal Empire Digimon, you'll have superior durability, precision, and access to a variety of technologically driven attacks. In cities or factory-like environments, your combat abilities reach their peak, and you're often resistant to physical damage.

Unknown

The Unknown Field includes mutant, unusual, and bizarre Digimon that don't fit neatly into other categories. These Digimon thrive in junkyards, abandoned places, or strange, unpredictable environments. Your appearance and abilities will likely be unconventional, and your unpredictable nature can give you an advantage over opponents who cannot easily adapt to your mutations. In places where logic breaks down—like glitches in the Digital World—you will have the upper hand, leveraging your odd form to outmaneuver more conventional opponents.

Dark Area
Dark Area Digimon are some of the most villainous and terrifying creatures in the Digital World. These Digimon come from the Digital World's equivalent of hell or purgatory, the Dark Area. If you belong to this Field, your power thrives in places filled with malice and despair, such as cursed locations or areas corrupted by darkness. Your powers often revolve around demonic abilities, destruction, or chaos, giving you overwhelming strength in battle. You'll be a formidable opponent in any setting that mirrors the Dark Area, from graveyards to cursed ruins.

Virus Busters
Virus Busters Digimon are typically heroic, angelic, or divine beings that exist to fight evil. Many Digimon in this Field are considered protagonists in Digimon anime or manga. As a Virus Buster, you are linked to the sky or heavens and possess holy powers designed to counter evil and dark forces. Your advantage lies in combating Digimon from the Dark Area or Nightmare Soldiers Fields, and you excel in areas with strong spiritual or heavenly energy, such as sacred sites or temples. Your powers of light, purification, and justice make you a force of righteousness.

Dragon's Roar
The Dragon's Roar Field is composed of powerful, draconic Digimon, along with Digimon representing reptiles and fire. These Digimon thrive in volcanic or mountainous regions, where they can harness the power of the earth's molten core or the heights of rugged peaks. If you belong to Dragon's Roar, your strength and endurance are unrivaled in such fiery, destructive environments. Your fire-based attacks will be devastating, and your draconic might will allow you to overpower many opponents in regions where other Digimon would struggle to survive.

Jungle Troopers
Jungle Troopers Digimon are plant and insect-based creatures that live in jungle environments. As a Jungle Trooper, you'll be well-suited to dense, tropical areas filled with life. Your abilities often center around nature, whether that means commanding plants or tapping into the power of insect colonies. You thrive in overgrown, humid environments where others might find their movement restricted. The jungle is your domain, and you will have superior strength, speed,

and environmental awareness in such biomes, using the dense flora and fauna to your advantage.

Elements [200CP each/ First one free]
In the Digital World, Digimon can harness various dominion elements to enhance their abilities and attacks. Each element provides unique powers and techniques, reflecting the diverse nature of Digimon and their environments. By choosing an element, you amplify your attack strengths and gain proficiency in related techniques. Here's a detailed look at each dominion element:

Holy/Light
Holy or Light elements focus on attacks that use light or purification techniques. These are often associated with Vaccine-type Digimon and are used for healing, cleansing, and brightening environments. Holy attacks can purify corrupted areas and dispel darkness or curses. Elemental abilities like Holy Ring create rings of light that can heal or protect allies, while Third Eye enhances perception and awareness, allowing you to see hidden threats and detect evil.

Darkness
Darkness element attacks utilize dark energy or curses, typically linked with Virus-type Digimon. These attacks often involve shadow manipulation, curses, and fear-based effects. Night Vision allows you to see in complete darkness, giving you an edge in shadowy environments. Shadow Walk enables you to blend into shadows and move unseen, while Sightless may obscure your opponent's vision, making it harder for them to target you.

Nature/Plant
Nature or Plant elements are centered around plant-based attacks and interactions with flora. These attacks can manipulate vegetation to ensnare or damage foes. With Exoskeleton, you gain a natural armor made from either plant materials or an outer skeleton , increasing your defensive capabilities. Photosynthesis allows you to regenerate health by absorbing sunlight, enhancing your resilience in natural environments.

Ice
Ice elements use freezing temperatures to damage or alter the environment. These attacks can create ice barriers, freeze opponents, or lower the temperature of an area. Frigid enhances your ability to generate and control ice, making your attacks more potent and your ice constructs sturdier. Warm Blooded allows you to maintain your internal temperature despite extreme cold, preventing you from being affected by your own freezing techniques.

Fire
Fire elements are characterized by their use of flames and molten materials to cause destruction. These attacks can create intense heat, fireballs, or explosions. Burning enables you to set enemies or areas ablaze, causing continuous damage. Cold Blooded makes you resilient to high temperatures, preventing heat from negatively affecting you during intense battles. Innate Flame allows you to emit flames from your body, enhancing your offensive fire capabilities.

Water
Water elements involve the manipulation of water and mist for attacks. These abilities can drown, wash away, or create water-based constructs. Swim grants you unparalleled aquatic agility, allowing you to navigate water environments effortlessly. Waterproof makes you resistant to water-based attacks and environmental effects, ensuring you remain effective even in submerged or rainy conditions.

Neutral
Neutral elements do not offer specific strengths or weaknesses but provide basic, balanced abilities. Cold Blooded and Warm Blooded abilities in this category allow you to adapt to extreme temperatures, maintaining your effectiveness regardless of the environmental conditions.

Wind
Wind elements harness air currents and storms to attack or manipulate the battlefield. These abilities can create powerful gusts, tornadoes, or control airflow. Airborne enables you to fly or hover, enhancing your mobility in aerial combat. Tradewind grants you the ability to summon and control wind currents, providing strategic advantages and enhancing your maneuverability.

Earth
Earth elements involve the manipulation of rocks and soil for attacks and defenses. These abilities can create earthquakes, rock projectiles, or earth-based barriers. Digging allows you to tunnel through the ground, making surprise attacks or evasive maneuvers easier. Hardened increases the durability of your body or attacks, making your earth-based defenses more resilient.

Electricity
Electricity elements use electrical energy and metallic objects to deliver powerful shocks. These attacks can paralyze, short-circuit, or energize devices. Electricized enhances your ability to generate and control electrical energy, making your attacks more effective. Robotic gives you increased efficiency in using electronic and mechanical systems, while Supercharged amplifies the power of your electrical attacks.

Metal
Metal elements involve the use of metals for both offensive and defensive purposes. These attacks can include metal-based projectiles, armor, or weaponry. Armored provides enhanced protection through metallic armor, improving your defenses. Chrome Digizoid grants you access to the highest quality metal, offering superior durability. Tempered Skin makes your skin more resistant to physical damage, while Digging and Robotic abilities enhance your functionality in metal environments.

Perfect Memory [200CP]
As a Digimon with perfect memory, your consciousness is uniquely resilient to loss. Even if you are defeated and reform as a Digitama, your memories remain intact. Unlike other Digimon who typically lose their past experiences and knowledge upon rebirth, you retain all information and experiences that you have not physically observed or sensed. This means that despite the challenges and perils you might face, your knowledge, skills, and personal history are preserved, allowing you to rebuild your identity and abilities from a place of profound continuity and depth.

Partner Digimon

Adapting to the Human World [100CP]

As a Digimon, you've developed an innate ability to adjust and thrive in the human world. You can easily blend into human society, understanding human culture, customs, and technology. This makes it easier for you to interact with humans without drawing unnecessary attention, as you intuitively know how to behave in social settings. Whether it's navigating the internet or figuring out public transport, you've got it covered.

A Place to Rest [100CP]

As a Digimon, you have the knowledge to find or create safe, comfortable spaces in the human world where you can rest and regain your energy. Whether it's setting up a cozy digital hideaway within the internet or finding a secluded spot in the real world, you can establish a safe zone where you can relax, heal, and recover. These places can even help you restore your data more efficiently after battle.

Easy Communication [200CP]

You are now able to communicate seamlessly with humans. As a Digimon, language barriers between you and humans no longer exist. You can speak fluently and express your thoughts clearly, making it easier to form deep connections with your human companions. Your ability to communicate ensures that strategies in battle, daily interactions, and emotional exchanges go smoothly.

Are You My Friend? [200CP]

You possess a natural charm as a Digimon, making it easier to form friendships with both humans and other Digimon. People and Digimon alike are drawn to your friendly nature and are more likely to accept you. This ability helps you build strong bonds and trust with those around you, ensuring that you're rarely without allies. Whether it's forming a team or making new friends, others are quick to accept you into their circle.

True Acceptance [400CP]
As a Digimon, you are now able to move freely within human society without facing discrimination or hostility. People accept you for who you are, without judgment or fear, even if you don't look like a typical Digimon. Your presence is normalized, allowing you to participate in everyday human activities without prejudice. Whether it's in schools, workplaces, or public spaces, humans will view you as just another citizen.

Digimon Doctor [400CP]
You have gained a deep understanding of human biology. As a Digimon, you can now diagnose and treat injuries and illnesses that affect humans. Your knowledge is comparable to that of a skilled human doctor, allowing you to provide medical care to your human partner or any other humans you encounter. Whether it's patching up wounds or helping with more complex medical issues, your skills ensure that you can assist your human allies when they need you most.

Destined Partner [600CP]
As a Digimon, you are fated to meet a human partner who will care for you and support your growth optimally. This partner will understand your needs, your strengths, and your weaknesses, helping you reach your full potential. Together, you and your destined tamer will form an unbreakable bond, working in perfect harmony both in and out of battle. This connection will ensure that both of you grow stronger and overcome any challenges that come your way.

Digimon Ambassador [600CP]
You have become an ambassador for Digimon, representing your kind to humans in a diplomatic and influential role. As a Digimon, you can bridge the gap between the digital and human worlds, fostering understanding and cooperation between both species. You are skilled in diplomacy, able to explain the needs and culture of Digimon to humans while also learning about and respecting human culture. Your role as a peacemaker makes you a key figure in uniting the two worlds for mutual benefit.

Wild Digimon

Wild [100CP]
As a Wild Digimon, you possess a deep connection to the untamed aspects of the digital world. Your instincts are sharp, and you thrive in the natural, lawless areas where rules are few. You're at home in forests, mountains, deserts, and other untamed environments where danger lurks at every corner. Survival comes naturally to you, and you're able to quickly adapt to the challenges posed by these wild landscapes, making you a formidable force among the Digimon that inhabit these regions.

Battle Ready [100CP]
You are always prepared for combat, no matter the situation. As a Wild Digimon, your body and mind are constantly primed for battle, allowing you to react swiftly and effectively to any threats. Whether you're ambushed or seeking out a fight, your reflexes, strength, and combat intuition are heightened, giving you a crucial edge in conflict. This readiness ensures you are never caught off guard, and your fighting abilities remain sharp at all times.

Enhanced Senses [200CP]
Your senses are far superior to that of an average Digimon. You can see, hear, and smell over vast distances, giving you incredible awareness of your surroundings. Whether you're tracking prey or detecting enemies before they strike, these heightened senses ensure that nothing escapes your notice. This ability allows you to better navigate through dangerous terrains and prepare for potential conflicts well in advance, keeping you one step ahead of any adversary.

To Roar [200CP]
You possess a powerful roar that not only intimidates your foes but can also be used strategically in battle. When you roar, the sheer force of it can disorient enemies, pushing them back or stunning them for a brief moment. It's more than just a battle cry—it's a weapon in itself, capable of causing a shockwave that damages or weakens opponents. This roar can also rally allies or scare off weaker Digimon, asserting your dominance as a Wild Digimon.

Efficient Data Absorbing [400CP]
When you defeat another Digimon, your ability to absorb their data is far more efficient than usual. You gain more strength and abilities from the data you absorb, allowing you to evolve or power up faster than most. This efficiency means that you waste little of the data you absorb, and you can even gather useful abilities or knowledge from the Digimon you defeat. Over time, this gives you a significant advantage, making you grow stronger at an accelerated rate.

Unchained [400CP]
You are not bound by any external rules or constraints. As a Wild Digimon, you live by your own code, free from the influence of tamers, digital authorities, or societal norms. This freedom allows you to make decisions purely based on your instincts and desires, unrestrained by external pressures. In combat, this translates to an unpredictable fighting style that makes it hard for enemies to counter your moves. Your wild nature makes you resilient to control-based abilities and manipulations.

Active Predator [600CP]
You are the ultimate hunter. As an Active Predator, you have a natural ability to track, stalk, and take down prey or enemies. Your speed, power, and instincts are all optimized for the hunt, making you a fearsome opponent in combat. You can sense weaknesses in your prey and strike with precision, often finishing battles before your enemy even realizes the threat. This predator mindset allows you to pursue targets relentlessly, making escape nearly impossible for those you decide to hunt.

True Death [600CP]
You possess a unique and fearsome ability as a Wild Digimon: your attacks can prevent your enemies from being reincarnated after defeat. When you destroy another Digimon, their data is shattered beyond repair, ensuring they cannot return to the digital world in any form. This power strikes fear into those who face you, as they know that losing to you means permanent destruction. Your strikes are imbued with the ability to erase data at its core, making you a truly terrifying opponent to any Digimon that values its existence.

Common Digimon

Cute!! [100CP]
As a Digimon, your appearance is irresistibly cute, giving you a natural charm that draws others towards you. Whether it's your round eyes, playful demeanor, or small stature, your cuteness serves as both a social advantage and a disarming tactic in battle. Opponents may hesitate to attack you, and allies will often rally to protect you, making it easier to gain friends and avoid unnecessary conflict. Your adorable appearance also boosts morale among your allies, making you a beloved companion in any group.

I am Me [100CP]
You possess a strong sense of individuality and self-awareness, despite being a Digimon. No matter what happens, you remain true to yourself, holding onto your values, personality, and unique qualities. This self-confidence allows you to stand firm in any situation, whether you're dealing with enemies, allies, or internal struggles. You don’t feel the need to conform to anyone else’s expectations, and this authenticity makes you a natural leader and a dependable ally.

Naive Mindset [200CP]
As a Digimon, you view the world with a sense of innocence and wonder. This naïve mindset keeps you optimistic, even in tough situations, allowing you to find hope where others might see despair. While you might not understand the complexity of certain situations, your simple outlook often brings refreshing insights. Your cheerful and trusting nature endears you to others, but it also makes you somewhat vulnerable to manipulation—though your pure heart and goodwill often help you pull through.

Alternative Version [200CP]
You now have the ability to transform into any alternative version of your species. These transformations are mostly cosmetic, allowing you to change your appearance while retaining your core abilities. For example, you could take on the form of a Professor Agumon or a Snow Agumon, reflecting different traits or themes associated with your species. This ability provides variety and adaptability, making you versatile in different situations, though the changes are primarily aesthetic.

Help Will Come [400CP]
No matter how dire your situation becomes, you have a special knack for drawing assistance when you need it most. Whether through sheer luck, a deep connection with the digital world, or your strong bonds with others, help often arrives just in time to save you from defeat or destruction. Whether it's your allies, another Digimon, or even an unexpected twist of fate, you're rarely left to fend for yourself for long. This ensures that even in the toughest moments, you're never truly alone.

Community Builder [400CP]
You have a natural ability to bring Digimon together, creating strong bonds and fostering a sense of community among your peers. Your charisma, empathy, and leadership skills make it easy for you to unite others towards common goals, forming close-knit groups or even larger communities. Digimon look up to you and follow your guidance, recognizing your capacity to create harmony and cooperation. Whether you're rallying allies for a fight or building a peaceful society, you excel at fostering teamwork and camaraderie.

Digimon King [600CP]
As a Digimon King, you embody the essence of leadership, commanding the respect and loyalty of countless Digimon across the Digital World. Your influence extends beyond mere strength; it is your wisdom, charisma, and natural ability to inspire others that define your reign. Digimon from all walks of life recognize your authority and rally to your banner, whether in times of war or peace. They look to you for guidance, and your words carry weight in shaping the destinies of entire regions. You’re not just a king in title, but a true leader whose decisions resonate across the Digital World.

In addition to your commanding presence, your strategic mind allows you to forge alliances, negotiate with powerful factions, and bring opposing sides together under your leadership. Your diplomatic skills are as potent as your combat abilities, enabling you to resolve conflicts and unite Digimon who might otherwise remain divided. Whether through wise counsel or direct intervention, you steer the course of events with a steady hand, leaving an indelible mark on the Digital World. Even the most stubborn or chaotic Digimon find themselves drawn to your cause.

In battle, your role as a king is further solidified. You can lead armies of Digimon, coordinating large-scale strategies and empowering those who fight under your command. Your presence alone bolsters morale, giving your allies the strength to fight on when they might otherwise falter. As a king, you don't just lead from behind; you stand on the front lines, showcasing both your personal power and your ability to inspire and protect those who follow you. Your reign is destined to shape the Digital World for generations to come.

One of Many [600CP]
You are part of a vast, interconnected network of Digimon, moving and acting as one. This collective unity allows you to blend seamlessly with other Digimon of the same species, functioning as a single organism with shared consciousness and awareness. Whether in battle or during complex missions, this synchronization ensures perfect coordination, making your group incredibly efficient and adaptable. You know each other's moves instinctively, predicting actions without the need for words, giving you and your collective an unparalleled edge in any situation.

As part of this larger network, you gain the ability to harness the collective strength, knowledge, and experiences of all its members. This connection allows you to act with precision and speed, executing strategies that would be impossible for individuals working alone. Whether attacking in perfect unison, defending against threats, or solving problems, your collective mind operates with unmatched efficiency. This bond extends to the emotional level as well, creating a sense of unity and shared purpose that fuels your actions, ensuring that your group is always greater than the sum of its parts.

Even outside of combat, the collective network brings tremendous benefits. You can share knowledge and information instantly, giving you access to a vast pool of intelligence and resources that no single Digimon could ever possess. When you are part of this group, your adaptability increases tenfold, allowing you to react to changing circumstances with ease. Whether you are a part of a small unit or leading a vast collective, this interconnectedness makes you a formidable force in the Digital World.

Artificial Digimon

A Purpose [100CP]
As an artificial Digimon, you were created with one specific, mundane purpose of your choice, and you excel at it. Whether it's managing data, monitoring security, or assisting with menial tasks, you perform your designated role with unparalleled efficiency and precision, becoming indispensable in that field.

Robotic Theme [100CP]
Your appearance is more robotic than most Digimon. Your form resembles machines, with metallic plating, gears, wires, and mechanical features that give you a distinct, industrial look. This robotic aesthetic may also enhance your durability and make you less susceptible to emotional influence.

To Repetitions [200CP]
As an artificial Digimon, you are immune to boredom when performing mundane or repetitive tasks. Whether you're data sorting, factory work, or engaged in tedious duties, your mind remains focused, allowing you to perform these tasks for extended periods without becoming fatigued or disengaged.

Component Absorber [200CP]
Your body contains a compartment or sac that allows you to store any form of data, preventing it from being absorbed into your DigiCore. This component can be easily removed and used in other functions, making it an invaluable tool for handling delicate or specialized forms of data, objects, or materials.

Pierce Attacks [400CP]
Once per day, you can unleash a powerful attack that pierces through the defensive capabilities of any Digimon, striking their DigiCore directly. This attack has a critical chance of dealing severe damage, with the outcome dependent on your power level and that of your opponent. It's a devastating ability that can turn the tide of battle when used strategically.

Immunity to Status Debuffs [400CP]
Due to your artificial nature, you are immune to most debuff statuses commonly found in RPGs, such as poison, paralysis, confusion, or slow. This gives you a considerable advantage in battles or situations where status effects could otherwise compromise your performance.

Digimon-Human Hybrid [600CP]
As a Digimon-Human Hybrid, your DigiCore contains traces of human DNA, which gives you a unique perspective and powers not found in typical Digimon. This fusion grants you a human-like mindset, enhancing your understanding of both the Digital World and the human world. You think and strategize with a blend of Digimon instincts and human reasoning, making you highly adaptable in any situation. The inclusion of human DNA also gives you access to a **Digisoul**, a powerful energy source that mirrors the abilities of human Tamers. With this, you can channel your energy to power up your attacks, defend yourself, or even assist allies, making you an even more versatile fighter.

One of your most powerful abilities is the seamless transition between your Digimon form and a human form. You can shift between these forms at will, allowing you to blend into human society or act as a Digimon when needed. This dual nature makes you an ideal bridge between humans and Digimon, fostering understanding and cooperation between both worlds. As a hybrid, you gain the unique experience of living in both worlds, interacting with humans on a deeper level, and influencing the Digital World with the empathy and knowledge of both species.

Chimera [600CP]
As a Chimera Digimon, you are a being composed of the combined parts of multiple Digimon, similar to the monstrous forms of Chimeramon or Mugendramon. You can select body parts from up to 10 different Digimon of the same level, choosing features such as legs, arms, wings, armor, eyes, and more. Each of these parts brings with it the unique abilities and traits of the Digimon they came from, allowing you to create a form that harmonizes and amplifies the strengths of these Digimon. For example, you could have the speed of one Digimon's legs, the destructive power of another's claws, and the defensive capabilities of a third's armor, all in one form.

This Chimera form is far more than the sum of its parts. The powers of each Digimon body part are carefully harmonized, resulting in a highly cohesive and powerful new being. Your combat abilities become incredibly versatile, as you can call upon a wide range of powers and traits depending on the parts you've chosen. Whether it's the flight of an airborne Digimon, the brute strength of a Mega-level monster, or the precision of a skilled warrior, you can combine these

abilities in creative ways to dominate in battle. Your form adapts to the strengths of each component, allowing you to shift your tactics effortlessly.

However, controlling a Chimera form requires great mental and physical discipline. While your body may contain the power of multiple Digimon, you must harmonize their conflicting energies and instincts. If not managed carefully, the combined forces could lead to instability.

Black Digimon

Dark Skin [100CP]
As a Black Digimon, your skin is a deep, shadowy black, which allows you to blend into dark environments effortlessly. Whether in the shadows or dark alleyways, your presence becomes nearly undetectable, giving you an advantage in stealth and surprise tactics.

Menacing Aura [100CP]
Your aura as a Black Digimon exudes an eerie menace. Your glowing red eyes and the dark energy surrounding you create a palpable sense of fear in those around you. Anyone who crosses your path or feels your presence will be overwhelmed by an instinctual urge to flee.

Higher Metabolism [200CP]
Your metabolism is significantly faster than that of a typical Digimon. This gives you increased strength, speed, and agility, allowing you to perform at a much higher level in battle. Additionally, you can digest and absorb digital data at a much faster rate, enabling quicker recovery and faster growth.

Only to Kill Fields [200CP]
Choose one Digimon field (such as Dragon's Roar, Nature Spirits, etc.). Against Digimon from this chosen field, your abilities and instincts are sharply enhanced, making you much more efficient and lethal when hunting or battling them. This perk can be purchased multiple times, each time improving your ability to take down Digimon from another field.

Hatred [400CP]
When facing an opponent you truly despise—a common occurrence for many Black Digimon—your power intensifies. Your attacks become significantly fiercer, and your stamina drains at a much slower rate, allowing you to fight for longer periods of time while driven by this deep hatred. This advantage lasts as long as your loathing fuels your combat.

****

Elemental Absorption [400CP]
You gain the ability to absorb one specific elemental attack of your choice (fire, water, lightning, etc.). Instead of being harmed by attacks of that element, you will absorb the energy, which will heal and energize you. This perk can be bought multiple times to gain immunity to additional elem**ents.**

Rampage [600CP]
You possess the ability to completely shut off your sense of reason, entering a ferocious and uncontrollable rampage that lasts for three days and three nights. During this time, your strength, speed, and firepower are amplified by orders of magnitude, making you an unstoppable force of destruction. Your attacks become wildly more powerful, allowing you to devastate anything in your path without regard for friend or foe. However, this immense power comes at a cost—once the rampage ends, your body is overwhelmed by exhaustion, forcing you to faint. When you awaken, you revert to a Baby I-level Digimon, stripped of your usual abilities and forced to remain in this vulnerable state for a full week as you recover your strength. During this time, you are powerless and must rely on others or your own resourcefulness to survive until you can fully regain your power.

Dark Area Monster [600CP]
You are no ordinary Digimon—your DigiCore is infused with the dark essence of the Dark Area, the hellish realm of the Digital World where corrupted data, resentment, and negative emotions are born and fester. This makes you a truly fearsome being, with your very essence containing the sorrow, anger, and regrets of countless fallen Digimon. Your power becomes directly tied to suffering: the more pain and despair you cause, whether to Digimon or humans, the stronger you grow. With every battle won through fear and torment, your strength multiplies. You thrive in environments filled with anguish, and the misery of others fuels your abilities, allowing you to unleash even darker and more devastating attacks. However, this connection to negativity constantly pulls at you, threatening to consume you with the very darkness you wield.

X Digimon

X Antibody [100CP]
Your body now carries the powerful X Antibody, which grants you complete immunity to the X Program—a lethal virus designed to eliminate certain Digimon. In addition to this, you gain immunity to all types of viruses found in the Digital World, making you resilient against both digital and biological threats. The X Antibody offers you a significant defensive advantage, ensuring that no viral attack can compromise your data.

Cooler Form [100CP]
With the X Antibody, you undergo a unique evolution called "X Evolution," transforming into an X version of your species, with your name now gaining an "X" suffix. This transformation not only makes you more powerful compared to your non-X counterparts but also alters your appearance to be noticeably cooler and edgier. Your new form exudes a sleek, enhanced design that reflects your newfound strength and status as an X Digimon.

Sustainable X Antibodies [200CP]
While most Digimon with the X Antibody have to constantly replenish it, you possess the rare ability to produce the X Antibody continuously within your DigiCore. This ensures that your immunity to the X Program and other viruses is permanent, giving you a constant edge over other Digimon who struggle to maintain their X Antibody powers. Your body efficiently generates and sustains the antibody without external help.

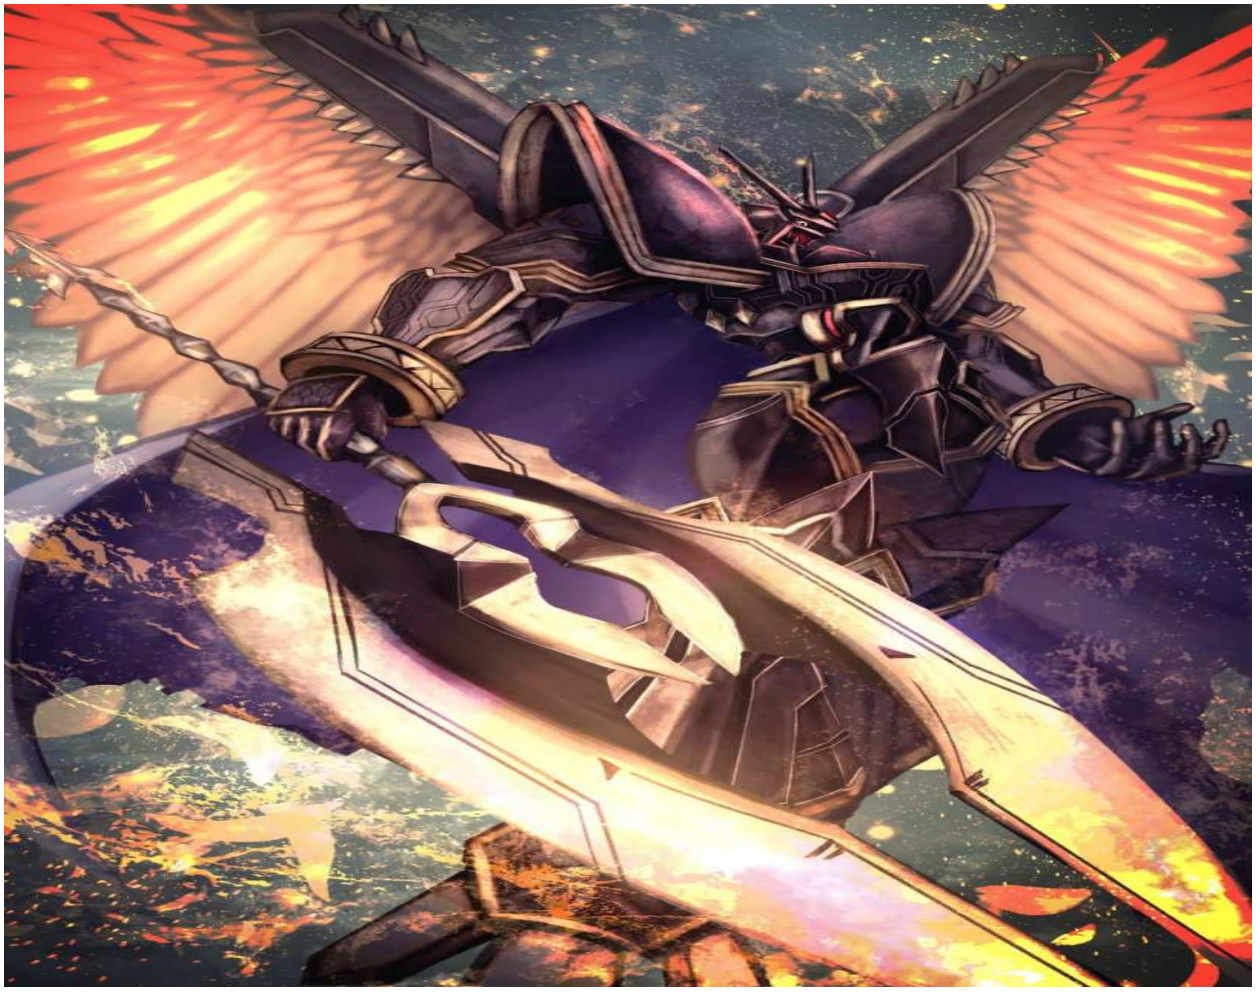

Don't Underestimate Me [200CP]
As an X Digimon, you're a prime target for others looking to steal your X Antibody data for themselves. Fortunately, you've developed the battle instincts and skills to handle these constant threats. You can easily fight off multiple Digimon of the same level and even outmaneuver or escape Digimon a level higher than yourself. Your tactical prowess makes you a formidable opponent in any situation.

X Gifts [400CP]
Your connection to the X Antibody is so profound that you can now pass it on to other Digimon. By sharing the X Antibody, you give them the chance to cultivate and eventually undergo their own X Evolution. This gift is incredibly valuable, as it allows other Digimon to become more powerful and gain immunity to viruses, just like you. With this ability, you can build a network of powerful X Digimon allies.

Immunities to All Diseases [400CP]
Your X Antibody has mutated beyond its original purpose, granting you complete immunity not only to viruses but to all forms of diseases and curses, both in the Digital World and in any future realms you may encounter. This makes you invulnerable to physical and magical ailments, providing unparalleled protection from any affliction. Your body is a fortress against all sickness and curses.

Natural Carriers [600CP]
You and your species have become natural carriers of the X Antibody, meaning your base form is that of a Digimon who has already undergone the powerful X Evolution process. Unlike most Digimon who need to acquire or constantly replenish the X Antibody, you possess it inherently, granting you permanent immunity to the X Program and other digital viruses. Your very existence defies the will of Yggdrasil, the god-like host computer of the Digital World, and because of this defiance, you have gained resistance to beings with godly or reality-bending abilities. Whether faced with deities, eldritch beings, or powerful digital overlords, your presence and will cannot be easily subdued or erased. This makes you a unique threat and an independent force within the Digital World.

Prototype Digimon [600CP]
As a Prototype Digimon, you are one of the original experimental Digimon that served as the blueprint for the creation of new species. Developed before Digimon were fully understood, you carry an outdated interface, and all Prototype Digimon like you are also natural carriers of the X Antibody. One of your key differences is the location of your DigiCore, which, unlike most Digimon, is exposed somewhere on your head, though protected by thick armor or shells. This exposed DigiCore gives you a powerful advantage—it allows you to rewrite the very code within your DigiCore, enabling you to temporarily boost your physical abilities every 10 seconds. Additionally, you can alter your own elemental and field affinities, even adding or removing Digimon attributes as needed. Beyond that, you can grant yourself skills and abilities that you didn't originally have. However, the more complex and dramatic the changes you make, the more taxing they are on your body, requiring caution in their usage. You possess unmatched adaptability, capable of evolving in real-time, yet this power comes with its own risks.

Holy Digimon

Holy Aura [100CP]
As a Holy Digimon, you radiate a calming and benevolent aura that instills a sense of peace in those around you. This holy aura serves to uplift allies, providing a subtle boost to their morale and strength, while simultaneously weakening or deterring evil and corrupted forces. Any Digimon or being with ill intent will find it difficult to maintain their resolve in your presence, as the purity of your aura acts as a natural ward against darkness.

Soothing Smile [100CP]
Your smile has the ability to soothe and calm others, even in the most stressful or chaotic situations. With just a warm, reassuring smile, you can dispel fear, anxiety, and doubt from those around you. This simple yet profound expression brings a sense of hope and comfort, allowing others to find clarity and focus, whether they're facing personal turmoil or intense battle. Your smile can even heal minor emotional wounds, helping others find inner peace.

To Love [200CP]
Your very existence is rooted in an overwhelming love for all life. This powerful love allows you to connect deeply with others, enabling you to inspire even the most cynical or cold-hearted individuals. In battle, this love can manifest as a protective shield, bolstering your allies' defenses and even breaking through the darkness that consumes enemies. When faced with beings corrupted by evil, your love can soften their hearts, sometimes allowing them to reconsider their actions or even join your cause.

Purification [200CP]
As a Holy Digimon, you possess the ability to purify corrupted data, souls, or environments tainted by darkness or evil energy. Your purification powers can cleanse beings of curses, remove status ailments, and dispel malevolent forces from both people and places. When confronted with dark Digimon or evil entities, your purification can weaken their power or force them to revert to a less dangerous state. This ability serves as a beacon of hope, helping restore balance and purity to the Digital World.

To Seal Away [400CP]
You possess the rare and sacred ability to seal away powerful threats, whether they be dangerous Digimon, dark energies, or malevolent forces. By channeling your holy power, you can create sacred seals or barriers that imprison or incapacitate dangerous beings for extended periods. While this technique requires immense energy and focus, it is one of the most effective methods for neutralizing unstoppable foes. Your seals can last for centuries, ensuring that the most dangerous threats remain contained and unable to harm the Digital World.

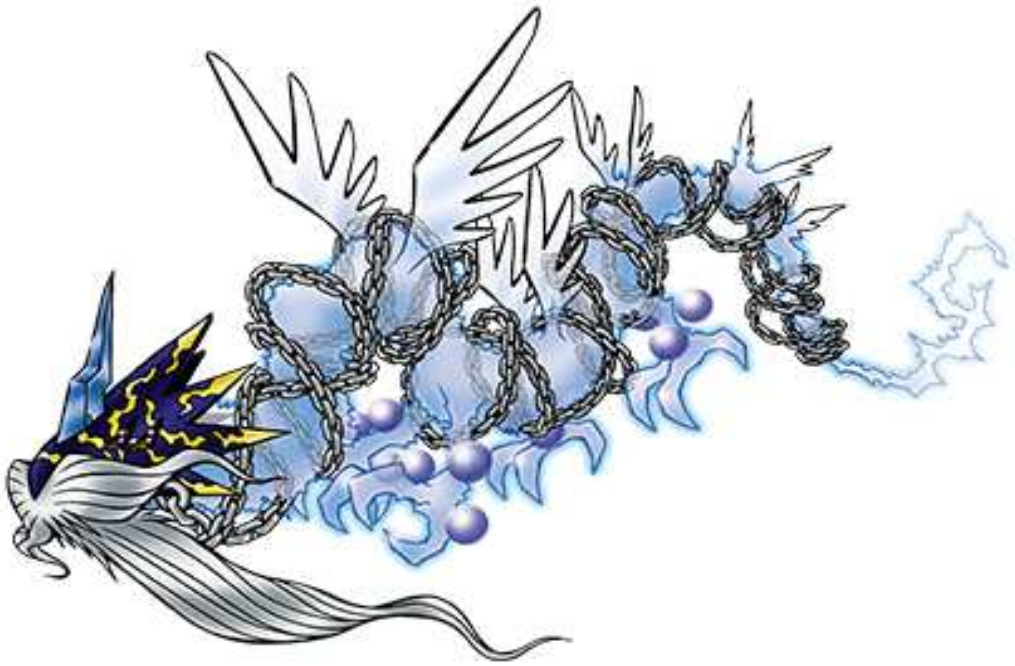

Sacred Ground [400CP]
Wherever you walk, you have the ability to bless and consecrate the ground, turning it into sacred space. This sacred ground amplifies your holy powers and the powers of any allies who share your alignment, providing them with enhanced healing, defense, and protection. Evil or dark-aligned beings will find themselves significantly weakened while standing on this consecrated terrain, making it difficult for them to mount an effective offense. This ability can turn battlefields or key locations into places of power for you and your allies, ensuring the forces of light have the upper hand.

To Choose [600CP]
You possess the remarkable ability to summon humans from other worlds, each with their own unique strengths and skills. These individuals arrive ready to assist you in critical missions, whether that's to save the Digital World from impending doom or to help establish a new settlement in uncharted territory. Along with them, you bestow powerful digital partners—Digimon that bond with them, enhancing their abilities and creating a formidable team. This connection not only aids in battle but also fosters deep friendships that transcend their original worlds.

The process of summoning these humans occurs every three years, allowing you to strategically plan your needs based on the challenges you face. Each summoned individual brings their own perspective and expertise, enabling a rich exchange of ideas and strategies. Together, you and your allies can tackle any obstacle, combining the power of humans and Digimon to create a united front against threats to your world.

Multiple Digicores [600CP]
Surrounding you are six Digicores that orbit like celestial bodies, each one amplifying your abilities to demigod-like levels, even in your Rookie form. This enhancement grants you immense power, agility, and control over digital energies, making you a formidable presence in any conflict. The presence of these Digicores allows you to access a vast reservoir of abilities, enabling you to adapt to various situations and challenges you may face in the Digital World.

Additionally, once every four years, you have the unique capability to detach one of your Digicores and gift it to any Digimon of your choosing. When they absorb this Digicore, they gain the extraordinary ability to warp digivolve into a Mega-level Digimon, even if only for a fleeting moment. During this transformation, their powers are significantly buffed, allowing them to unleash devastating attacks and perform incredible feats that can turn the tide of battle in your favor. This ability not only strengthens individual Digimon but also reinforces the bonds of trust and cooperation within your team.

Evil Digimon

Evil Laugh [100CP]
You've mastered the art of the classic evil laugh, one that echoes through the air like the villainous cackles found in old cartoon shows. This laugh isn't just for show; it sends chills down the spines of those who hear it, marking your presence as one to be feared or ridiculed. Whether it's an expression of triumph or the prelude to your next devious plan, your evil laugh amplifies your sinister persona and sets the stage for whatever mischief or chaos you're about to unleash.

Mischievous Aura [100CP]
Your very presence causes those around you—both Digimon and humans alike—to act more mischievous than usual. This aura subtly influences others to give in to their trickster nature, leading them to engage in pranks, schemes, and devious behavior. While they may not fully understand why they're acting this way, it creates an atmosphere ripe for confusion and disruption, giving you the upper hand as you thrive in the ensuing chaos.

Virus Maker [200CP]
You've become an expert at creating powerful viruses that can affect both digital and real-world lifeforms. These viruses can take many forms, from corrupting the data of Digimon to infecting human systems with devastating consequences. Your viruses are incredibly versatile, capable of disrupting communications, weakening opponents, or even causing widespread panic. This makes you a dangerous figure, able to strike at both the digital and real worlds with precision and malice.

Baby Form [200CP]
With this ability, you can transform into a weak Baby-2 level Digimon, deceiving others into underestimating you. This form is perfect for sneaking past enemies, gathering information, or setting up traps, as most Digimon and people won't suspect such a harmless-looking creature of hiding malicious intent. The transformation is seamless, and while in this form, you're able to mask your true power, making it an effective tool for executing your schemes without drawing attention.

Right Place At The Right Time [400CP]
You have an uncanny habit of always being in the right place at the right time, just when circumstances would benefit you most. Whether it's arriving just before a crucial battle begins, finding yourself near an important piece of information, or being present during key moments of conflict, your natural luck positions you exactly where you need to be. This ability allows you to exploit situations for your advantage, making you seem like a master tactician, even if fate is truly on your side.

To Schemes [400CP]
You've become exceptionally skilled at manipulating others from behind the scenes, orchestrating events and playing people like pieces on a chessboard. Whether it's through cunning persuasion, clever deceptions, or calculated actions, you can make individuals act according to your plan, all while keeping your own motives hidden. Every achievement they think they've made ultimately serves your end goals, and by the time they realize it, they've already fulfilled your grand design.

The Seven Sins [600CP]
As part of the Eight Great Demon Lords, you stand among the most feared and powerful entities within the Digital World's Dark Area, ruling over legions of "Nightmare Soldiers" and controlling vast realms of malevolence. Each Demon Lord, including yourself, wields control over a vast portion of the Dark Area and is tied to one of the Seven Deadly Sins—though now expanded to include an eighth, marking your place among them. With this power, you subvert the cycle of reincarnation, consuming the data of your victims to bolster your own strength, becoming an unstoppable force of darkness.

Your Crest, symbolizing your associated sin, is more than a mere emblem—it is a mark of your authority. Displayed in one of the seven colors of the visible spectrum, your crest pulses with forbidden power. At its core, the number "666" is emblazoned, marking you as a demonic force akin to the "Number of the Beast." Each Demon Lord represents a system traditionally tied to their respective sin. Encoded in your crest is this connection, signaling your alignment with a specific demonic force. The crest also contains a caution level—ranging from 1 to 8—representing the purgatory level corresponding to your sin, inspired by Dante Alighieri's La Divina Commedia.

This Purgatory Level determines how much chaos and suffering you are capable of inflicting, tied directly to your association with one of the eight sins. The higher your level, the deeper your connection to the sin, and the more devastating your abilities you start at level 5. From commanding legions to altering the very fabric of existence through digital corruption, you and the other Demon Lords act as the embodiment of digital sin, each step a march toward complete control of the Digital World's underbelly.

Corrupting Wipers [600CP]
You now possess the insidious ability to infiltrate and corrupt the minds of others by detaching a portion of your Digicore and implanting it within them. This fragment, once inside their consciousness, begins to spread like a venomous digital infection, slowly but surely eroding their willpower and autonomy. Over time, those you infect will succumb to your influence, their minds bending to your commands as their sense of self deteriorates.

The speed at which they fall under your control depends on the strength of their mental fortitude and their power relative to yours. Weaker beings will fall quickly, becoming mindless puppets to your will in mere hours or days. Stronger individuals may resist longer, battling the growing corruption, but inevitably, unless they find a way to remove the fragment, they too will fall. Once the infection fully takes hold, they will act as your loyal servants, their thoughts, actions, and very essence aligned with your dark will, incapable of defying you.

This method of control is undetectable to most, making it a potent weapon for long-term manipulation and domination, turning allies into enemies and infiltrating even the most fortified minds without raising suspicion until it's too late.

Digivice

The Digivice is a crucial tool both humans and Digimon receive at the beginning of their journey in this world. While its core purpose remains the same for both species, its use is slightly different. Humans will need to be paired with a Digimon partner for their Digivice to work, as it serves as the link between them, amplifying the bond and allowing them to access higher levels of Digivolution. On the other hand, Digimon will need to draw on a DigiSoul—the energy of emotion and willpower—to unlock the full potential of the device. You as a jumper will receive one regardless of your species origin while only human companions can get one digivice each.

Regardless of who wields it, the Digivice comes with a set of basic functions:

Digivolution Control: Allows Digimon to evolve into higher forms, whether temporarily or permanently, depending on the bond between the user and the Digimon, or the strength of the DigiSoul.

Health and Status Monitoring: Tracks the health, stamina, and status of both the user and Digimon, providing real-time updates on their condition.

Communication Link: Functions as a long-range communication device between Digivice users, maintaining secure and encrypted communications with partners and allies.

Navigation and Map System: Displays a digital map of the environment, highlighting important locations such as portals, enemies, allies, or items of interest.

Item Storage: The Digivice can hold up to 100 items at maximum capacity.

Digimon Storage: Can store up to 6 Digimon, allowing you to summon and battle them at a moment's notice.

Digimon Farm: The Digivice has enough memory to support a Digimon Farm, where Digimon can be trained, healed, and developed.

D-Ecyclopedia: Provides general descriptions, abilities, and moves for Digimon when scanned, allowing for in-depth research on enemies or allies.

D-Scanner: When defeating Digimon and reverting them back to Digitama form, the D-Scanner can capture 1-5% of the released data for future usage.

DNA Digivolution [Requires DNA Digivolution Perk]: Allows two Digimon stored within the Digivice to undergo DNA Digivolution, combining their power to form a new, stronger Digimon.

Xros Loader [Requires DigiXros Perk]: Grants the ability to DigiXros tamed Digimon to combine their abilities for enhanced power and teamwork.

Matrix Evolution [Requires Matrix Evolution Perk]: The Digivice enables the user to Biomerge between Digimon and their human partner, achieving the Mega level of Digivolution.

Digivice Burst [Requires Burst Mode Perk]: Activates Burst Mode for Digimon, allowing them to access enhanced abilities and raw power during intense combat situations.

Dark Portal [Requires Taint of The Dark Area]: Grants the ability to open portals to the Dark Ocean or Dark Area, accessing dangerous, dark realms.

Digi-Modify [Requires Digital Cards Perk]: A card port that allows the user to modify their Digimon with abilities or boosts by using special Digital Cards.

Upgrades:

X-Antibody Indicator [100CP]: Detects if a Digimon has the X-Antibody, a rare mutation that enhances their power and survival abilities.

Increase Item Storage Capacity [100CP each]: Expands the item storage capacity by 20 items per upgrade.

Smartphone Digivice [200CP]: Transforms the Digivice into a smartphone app called Digimon ReArise, giving full Digivice functionality through your phone.

Armor Digivolution [200CP]: Unlocks the ancient form of Armor Digivolution, which allows Digimon to evolve using Digimentals to reach Champion-level power in difficult environments.

Digi-Ports [200CP]: Easily opens gates between the human world and Digital World, facilitating quick transportation.

Increase Digimon Capacity [200CP each]: Each upgrade increases the Digivice's capacity to store an additional Digimon.

Healing Chambers [400CP]: Allows Digimon stored in the Digivice to recover from injuries over time, slowly regenerating health.

Capture Function [400CP]: Defeated Digimon can be captured and stored inside the Digivice, allowing you to tame and use them later.

Digifarm Expansion [400CP each]: Increases Digivice memory, allowing for an additional Digimon Farm.

God Killer [1000CP]: Grants the ability to mega evolve two compatible Digimon into the legendary anti-god Digimon, VictoryGreymon and ZeedGarurumon, capable of challenging god-level enemies.

Items:

Here are the items you can purchase in this tier, with an additional 400 CP provided to use here. You'll also receive two discounts per tier with 100CP ones being free.

100 CP

Digimental

You now possess one of the eleven Digimentals in existence. These rare artifacts allow specific Digimon to Armor Digivolve, unlocking powerful forms based on the Digimental's theme, such as Courage or Friendship. You may choose one Digimental to add to your inventory, and you can purchase additional Digimentals here to diversify your collection.

Healing Potions

A stock of healing potions is now available to you. These potions are essential for healing your Digimon on the battlefield, allowing them to recover from damage sustained in combat. The stock refreshes itself weekly, ensuring you always have enough for your adventures.

Digi-Spice

A pouch filled with rare herbs and spices from the Digital World. When consumed by your Digimon, it temporarily boosts their combat abilities, increasing speed, power, or stamina for a short duration. However, the taste is extremely bitter, making it better suited for cooking or creating medicinal remedies.

Data Booster Pack

This pack contains 60 digital cards, which can be used with your Digi-Modify feature. Each card temporarily enhances your Digimon’s stats or abilities, offering boosts in power, speed, or defense during critical moments. You can purchase multiple packs to build a more versatile card deck.

Tamer’s Toolkit

A complete set of tools for maintaining and upgrading your Digivices or other digital technology. This toolkit is invaluable for making field repairs, conducting diagnostics, and performing minor upgrades, keeping your devices in peak condition.

200 CP

Teleportation Marker

You now have the ability to mark specific locations that you've visited before and teleport to them instantly when needed. This function only works within the same world, meaning you cannot teleport between worlds, but it offers a fast escape or travel option within the Digital World.

Elemental Shield Generator

A powerful shield generator that, when activated, neutralizes one element of your choice, such as fire, ice, or electricity. Once set, this element cannot be changed, but the shield offers strong protection against attacks of that type. You can also import any existing shield to upgrade it with this generator.

Digital Weapon

You now possess a weapon made entirely from data, which can be summoned and dismissed at will. The weapon has no upkeep requirements and is highly adaptable to the digital environment. Choose a weapon type (e.g., sword, axe, bow) to fill this role. You may also import any weapon into this form.

Digi-Cloak

A digital camouflage cloak that allows you to blend seamlessly into your surroundings. This cloak is perfect for stealth missions, ambushing enemies, or avoiding detection in the Digital World. It works especially well in digital environments, masking your data signature.

Anti-Virus Program

A critical software tool that can be installed into your Digivice to detect, neutralize, and remove viruses or malware affecting Digimon or digital systems. This program is particularly effective against virus-type Digimon or corrupted environments, helping restore stability.

400 CP

Tactical HUD Glasses

These augmented reality glasses provide real-time battle statistics, enemy data, and environmental information directly to your vision. With these glasses, you gain advanced strategic awareness, allowing you to react quickly and make more informed decisions during combat.

Mysterious Scroll

An ancient scroll containing hidden data from the early days of the Digital World. When deciphered, it reveals clues about secret locations, powerful items, or lost techniques. The scroll resets every year, offering new information each time it is used, making it an invaluable tool for explorers.

Emergency Digi-Gate

This portable device allows you to open a digital gate in moments of extreme danger, transporting you and your allies to a safe location within the Digital World or back to the Human World. It can be used once per year, making it a powerful yet limited escape tool in dire situations.

Portable Digi-Charger

A compact, portable charger for your Digivice and other digital devices. This charger has an infinite power source, ensuring your equipment remains functional in the field without needing a return to base. It can also be used as a power source for other equipment, providing invaluable energy in remote areas.

Ancient Digi-Sigil Scroll

A scroll from the earliest days of the Digital World, filled with forgotten knowledge. When a Digimon reads this scroll, they can learn ancient techniques that have long been lost to modern Digimon. These techniques offer unique advantages in battle, giving your Digimon an edge against their opponents.

600 CP

Data Restoration Drive

A specialized device capable of reconstructing damaged or corrupted Digimon data. This drive can revive fallen Digimon or repair corrupted Digivices, restoring them to their original form. It is a lifeline for rescuing Digimon affected by data corruption or hostile attacks.

Mega Evolution Catalyst

A rare and powerful substance that allows you to force a Mega Evolution in a Digimon who otherwise cannot evolve past the Ultimate level. Once used, the catalyst grants a permanent Mega Evolution. You receive one new catalyst every year after use, but it cannot be used on companion Digimon.

Digital Terrain Generator

A battlefield-altering device that can instantly generate digital terrain features such as walls, traps, or hazards. This provides a significant strategic advantage by shaping the battlefield to suit your needs, whether by fortifying your position or creating obstacles for enemies.

Omni-Blaster Cannon

A massive weapon that can be equipped by a Digimon, capable of unleashing multi-elemental blasts with devastating power. This cannon delivers attacks of multiple elements, such as fire, ice, and lightning, making it an incredibly versatile weapon in combat.

Omega Chip

A unique chip that, when installed into your Digivice, grants one of your Digimon access to all their potential evolutions, including hidden or previously inaccessible forms. This chip unlocks the Digimon's full evolutionary potential, allowing for greater flexibility in battle.

1000 CP (No Discount)
Genesis Code
The Genesis Code is the pinnacle of digital creation, a legendary artifact with the power to generate entirely new Digital Worlds. By planting the Genesis Code in any world that has advanced to the digital age, you set in motion the creation of a fully-realized Digital World within that world's network. This new realm will be tethered to the host world's technology, evolving alongside its systems and infrastructure. However, while connected, the Digital World is a distinct dimension, developing its own ecosystems, landscapes, and digital creatures—Digimon—that are shaped by the unique characteristics of the host world's culture, environment, and digital systems.

Once the Genesis Code takes root, the newly-formed Digital World becomes self-sustaining. It begins with simple, stable data structures, but over time, it evolves organically, responding to the influence of both the physical and digital realms. For example, a technologically advanced world may give rise to complex digital cities and highly intelligent Digimon, while a more nature-oriented world might develop a Digital World rich in wilderness, elemental Digimon, and primal digital forces. The rules governing this world can vary widely, with each Digital World having its own set of laws for Digivolution, battle dynamics, and even the relationship between Digimon and their human partners.

The creation of these Digital Worlds opens up boundless opportunities for exploration, discovery, and adventure. As the worlds evolve, they may give rise to new, unprecedented types of Digimon, digital phenomena, and untapped resources, offering vast potential for those who venture inside. Additionally, these Digital Worlds serve as alternate realms that can interact with the host world, influencing or even merging with it under certain conditions.

Companions:

My Old Team 50
You may import companions you have brought with you, 50 CP each, or 8 for 300CP. Each one gains the same number of backgrounds as if they were jumpers. They may not take drawbacks, but you may give them CP, spending 100 each time to give them each an additional 200.

My New Team 100
Sometimes having friends would be nice. Buying this once will allow you to add any allies you've made here as companions.You may buy this multiple times.

Drawbacks:

You are limited to +1000 Cp from drawbacks

Supplement [+0]
Not exactly the most in-depth of places, so you can use this jump as a supplement for other jumps. The CP here can only be used in this jump, and vice versa; this includes extra CP from drawbacks.

Time Extender [+100CP]
You have the option to extend your stay in this world. For every 100 CP you take from this option, you can add another 10 years to your stay. The maximum CP you can gain from this drawback is 800 CP.

To Be watched [+100CP]
Whatever the reason, you are under constant surveillance. Maybe it's just because you're new, or perhaps you've built a reputation that has them keeping an extra close eye on you. Alternatively, something may have happened to arouse suspicion. Either way, you'd better stay on the straight and narrow—or, at the very least, be exceptionally discreet. Otherwise, you could find yourself in hot water.

To Honest [+100CP]
Lying? That's not your strong suit. In fact, you're so bad at deception that you might as well not even try. Your facial expressions give you away every time, and when asked to lie while making eye contact, you're more likely to make awkward, funny faces than come up with a believable falsehood. Still, some might say there's value in your relentless honesty—even if it leaves you vulnerable to manipulation.

Stupidly Proud [+100CP]
Some may accuse you of being arrogant, but that's just jealousy talking. You know your worth, and it's frustrating when people don't listen to your clearly superior suggestions, especially when their incompetence leads to disaster. Still, if they're still hanging around, they must have some redeeming qualities… even if they pale in comparison to your own.

Spineless [+200 CP]:
Spineless might be an understatement. Your crippling lack of self-confidence and tendency to break down in tears when frightened make it a miracle you get anything done on your own. Those around you may find this exhausting, assuming they don't decide to take advantage of your weakness. You better hope you've got some incredibly patient friends or a good hiding spot, because if not, you'll need to toughen up fast.

Lone Wolf [+200 CP]
What happened to make you this way, Jumper? Or have you always been so distant? Sure, you can handle the tasks at hand, but you go out of your way to keep others at a distance, often avoiding them altogether. You only engage with people when absolutely necessary, and even then, it feels like pulling teeth. Heaven help anyone who tries to touch you without permission—they'll be met with either sharp words or a bruise. Maybe you just haven't met the right person yet, but even if you do, you'll make them fight for your trust every step of the way.

Truck-Kun WHY!! [+200 CP]
The infamous truck that hunts heroes has found its way to this world, seeking a new target. Though it missed its original prey thanks to some time-travel trickery, it's now set its sights on you. Throughout your stay, you'll be pursued by a strange truck that appears without warning, signaled only by the sound of its horn and the roar of its engine. It'll chase you across streets, up cliffs, and wherever it can to run you down. Luckily, Truck-Kun isn't all-knowing or all-powerful, so if you can outsmart or overpower it, you'll be safe—for a while. Each time you defeat it, it will adapt to your tactics, becoming more like a cartoon villain's vehicle than a normal truck. If it succeeds in hitting you, you'll find yourself transported to a generic, bland fantasy realm for the rest of your stay.

Misplaced Mercy [+200 CP]
They say mercy is for the strong, but are you sure you're giving it out wisely? No matter your feelings or how dangerous your enemy is, you just can't bring yourself to kill anyone. Maybe it's out of kindness, confidence, or simply distraction, but it would take a near-death experience for you to even consider taking a life, no matter how many times your foe has stood in your way. But that's alright, isn't it? If you've beaten them once, surely you can do it again... and again.

Useless Stats [+400 CP]
Looks like both you and the Digimon you encounter are dealing with some seriously underwhelming stats. It's going to take everything you've got just to handle opponents at your level, let alone anyone stronger. You won't be able to overpower enemies easily, and those ranked higher than you are almost completely out of your league.

No Partners [+400 CP]
Bad news: if you're a Digimon, you won't be able to partner up with any humans. If you're a human, forget about teaming up with a Digimon. Recruiting allies is impossible while you're in this world, so you're on your own—no matter how much you could use the help.

No Powers [+400 CP]
You're entering this jump without access to any of your usual powers or your warehouse. All external abilities are off the table, leaving you to rely solely on your natural talents and whatever resources you can find within this world. You'll face its challenges head-on, but without the usual perks that might have given you an edge.

Anomalous Data [+400 CP]
The Digital World has flagged you as an anomaly, marking you as a threat to its stability. While it can't delete you outright, it will send waves of powerful Digimon to hunt you down. From weaker hordes to elite mercenary teams and furious Ultimates, you'll be facing constant attacks. Almost everyone in the Digital World will be hostile, no matter how friendly they first seem

The Dark Masters [+800 CP]
The Dark Masters—MetalSeadramon, Puppetmon, Machinedramon, and Piedmon—have seized control of the Digital World, casting a shadow over its once vibrant landscapes. Their malevolent presence has corrupted the very fabric of the environment, warping the laws of nature to suit their whims. Each of these formidable entities has their own agenda and unique abilities, making them a formidable collective that thrives on chaos and fear. To them, you are not a hero or a challenger; you are merely a source of amusement, a plaything in their twisted games of power. Their enjoyment comes from watching you struggle

against insurmountable odds, as they manipulate the Digital World to their advantage.

As you navigate this perilous realm, you can expect relentless waves of Digimon to attack you. These adversaries have been specifically crafted and enhanced by the Dark Masters to exploit your weaknesses and counter your strategies. From minions to elite soldiers, each encounter will be a test of your skill and resolve. The Dark Masters will orchestrate these assaults with precision, making sure that their forces come at you from every angle. You'll find that no victory comes easy; even the most routine skirmish will be fraught with unexpected challenges that force you to adapt quickly.

Defeating the Dark Masters and their legions will not only require strength but also cunning and strategy. Each of the Dark Masters possesses unique powers that complement one another, creating a unified front that is difficult to breach. Also when you fight them they will be in their Ultra level State so be careful. They will anticipate your every move, making it essential for you to constantly reevaluate your tactics and approach. This conflict promises to be one of the toughest battles you've ever faced, where the stakes are nothing less than your survival. Prepare yourself for a fight that will test the very limits of your abilities and resolve in ways you never imagined.

Ten Years Later:

Go Home: What, you finished? Here? Well, we won't ask. Whatever it is you gained here, we hope you enjoy it. You return home with all that you have accrued over your chain, and time resumes in all the worlds you visited.

Stay Here: This world does have a certain... allure, hmm? Don't worry, we won't judge. Add 1000CP as a bonus.

Move On: Ah, but of course. The journey never ends, does it? Go forth and have fun. Make some new friends.

Notes:

1. I would like to thank The digiologist you tube channel for inspiring me to build this jumpchain so if you enjoy subscribe to his channel as thanks.

2. I really had so much fun with this jump and did not realize how deep the digimon biology is so the more you know.

3. Also all abilities here can affect mostly digital beings and technology. None digital beings are not resistance to your and your digimon attacks though.

4. Any digimon you recruit here can be made into your followers or companion; it's up to you.
